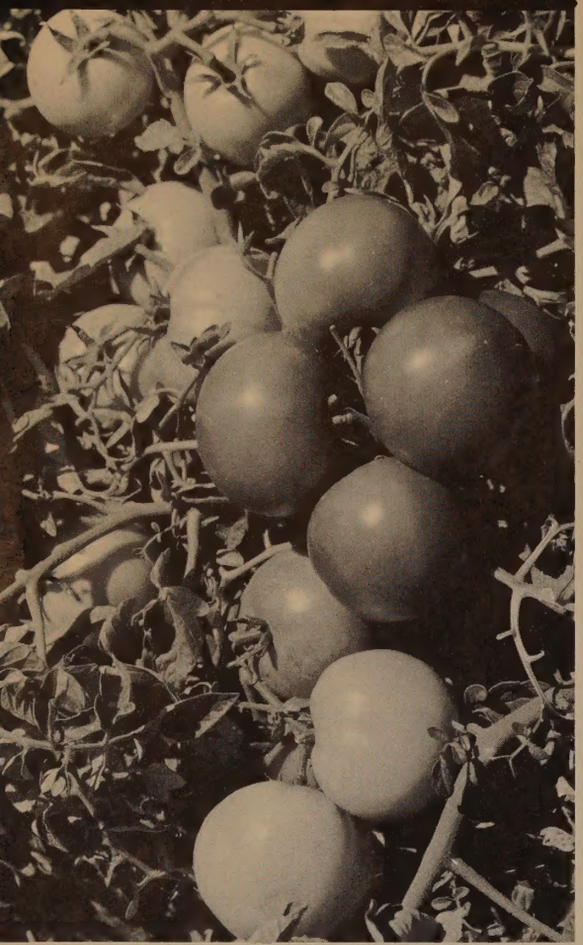
Harris Seeds



HARRIS' FIREBALL

FIREBALL TOMATO

Now the leading early tomato in the Northeast, both for market and canning. A Harris origination, noted for:

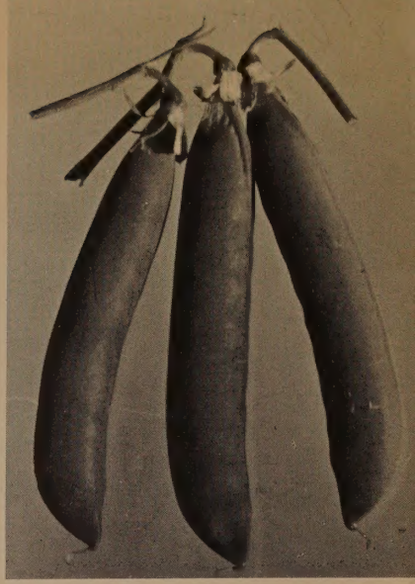
Round, smooth fruit . . . Good size, even color . . . Firm structure . . . Small compact vines . . . Extra early set, even in cool weather . . . Heavy early yields. See page 20 for details.

FRENCH HORTICULTURAL BEANS

Harris' Special Strain is first choice of many critical growers. Here's why:

Vigorous growth, uniform set and big yields . . . Long pods of desired market type . . . Attractive bright red coloring. See page 2.

FRENCH HORTICULTURAL *Harris' Special Strain*



GREATER PROGRESS

GREATER PROGRESS PEAS

These features make our Greater Progress a leader for market, shipping and roadside stands:

Fine appearance, deep green color . . . Large, well-filled pods . . . Dwarf, husky vines . . . Early and heavy yielding. See page 15.

Days to maturity are given in this catalog simply as a guide to relative earliness and the actual number of days may vary considerably with conditions. For vegetables grown from plants, maturity is from the time plants are set out.

Please read before ordering

TERMS AND DISCOUNTS

CASH DISCOUNT:

All Seeds in this catalog: **3% discount** for cash with order.

Jiffy Pots and Market Paks: 2% special discount.

No discount on Plants, Nursery Stock, Accessories, etc. These are strictly net cash items.

C.O.D. SHIPMENTS:

Not recommended because of frequent delays and extra fees (minimum 60¢). No cash discount on C.O.D.'s. Onion sets, plants and nursery stock will not be sent C.O.D.

TIME PAYMENTS:

To customers of established credit, we offer the terms below. If you wish to open an account, please furnish bank and two business references.

Vegetable Seed to Commercial Growers: All spring shipments due net Aug. 1st; shipped after Aug. 1st, due net Dec. 1st.

Flower Seeds to Florists and Plant Growers: All spring shipments due net June 1st; shipped after June 1st, due net Dec. 1st.

Note: These terms apply on seeds only. Plants and accessories are strictly cash with order.

PLEASE ORDER EARLY. While we can give your orders prompt service here, we suggest you allow for possible delay in shipping next spring.

DELIVERY OF SEEDS

All **SEEDS** in this catalog are now **PREPAID** within the U.S.A. (not Canada), except beans, corn, and peas beyond the 5th zone as explained below. We will normally ship by parcel post or truck, depending on size of shipment, but reserve the right to select the most economical method.

IMPORTANT: To facilitate delivery by truck, *be sure to give the name of the road where you live* even if not part of regular post-office address.

Beans, Corn and Peas beyond 5th zone — add 5¢ per lb. for extra shipping charges. The 5th zone extends about 1000 miles from Rochester and includes Minnesota, Iowa and Missouri on the West, and Alabama and Georgia to the South.

NOT PREPAID ITEMS. Plants, Roots, Onion Sets and Accessories are shipped at purchaser's expense, except where quoted prepaid. Please specify whether you want these by parcel post, truck or express.

Parcel Post. The most economical for smaller shipments: Up to 300 miles from Rochester, mail is cheaper than truck on 70 lbs. or less. Beyond 300 miles, 50 lbs. or less. Please note shipping weights and obtain rates from your post office to include postage with order.

Truck. Service is available from Rochester to most points and this is usually the best method for shipments over 75 lbs. Minimum charges vary, usually around $5.00.

Express. Not usually recommended but may be used for certain plant shipments, etc. Give nearest office. Sent collect.

Freight. Rail freight is no longer satisfactory in most cases, but may be specified where direct service is available. Minimum $4.00.

RUSH SHIPMENTS: Quicker service is usually obtained by specifying Parcel Post "Special Handling" or "Special Delivery." On flowers and small lots, first class mail and air mail are helpful. The extra cost of these services will be billed.

CONDITIONS OF SALE

All of our seed is thoroughly tested for vitality and germination, and every package is marked with the results of our tests. We guarantee arrival in good condition and warrant to the full amount of the purchase price that our seeds and plants are of good vitality and true to name as described on the container. So many other factors besides the seed influence the success or failure of crops that, in common with all responsible seedsmen, we specifically limit our liability in all instances to the purchase price of the seed.

PRICES *are subject to change without notice and to our stocks being unsold.* For smaller quantities than listed here, refer to our general catalog which will be mailed to you separately.

1962 PRICE LIST FOR MARKET GARDENERS AND FLORISTS

HARRIS SEEDS

ASPARAGUS SEED

1 Oz. usually produces about 500 roots.
1 Lb. of seed produces roots for 1 acre.

206 Tetra *(New)*

This is a tetraploid or double chromosome strain, reported to have thicker stalks than the standard types. Brand new and not yet field tested, it should be worthy of trial by growers for roadside stands or local markets where large size stalks may be in demand.

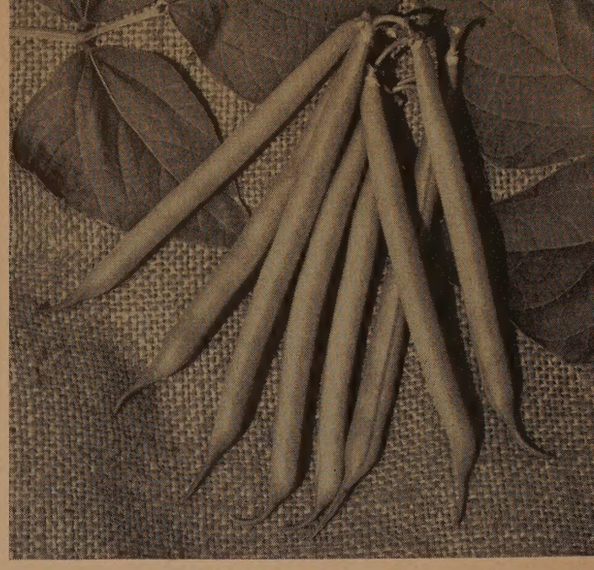
Oz. $1.00; ¼ Lb. $3.10; Lb. $10.00; 5 Lbs. or more @ $9.50.

208 Waltham Washington

Now recognized as a superior, productive selection of the regular Washington type. Spears are more uniform and of better average size; color is medium dark green with purplish tinge. Satisfactory rust tolerance. Developed by Prof. R. E. Young in Mass.

Oz. 80c; ¼ Lb. $2.25; Lb. $6.50; 5 Lbs. or more @ $6.00.

ASPARAGUS ROOTS: Well grown 1-yr. roots of both Waltham Washington and the new Tetra are offered on page 22.



TENDERCROP
Finest quality and appearance.

BEANS

One pound of beans will plant about 150 ft. of row.
Sow 70-90 lbs. per acre.

CONTENDER
Extra length, smooth, mosaic resistant.

TREATED BEANS

All our beans are treated with CAPTAN-DIELDRIN, for protection against seed rot and maggot injury. Permits earlier planting, gives better stands under adverse conditions.

83 Tendercrop

Rich Flavor, Dark Green Color

Its beautiful pods and exceptional quality give Tendercrop top rating with customers at roadside stands, and it is much in demand by commercial freezers. The smooth, dark green pods are 5-5½ in. long, fully round, slender and nearly straight with a characteristic pointed tip. They look fresh and appetizing and are delicious to eat, full-flavored, tender and free of fiber.

The vigorous 16-inch vines yield a concentrated production of uniform pods and are resistant to common bean mosaic. Seed color is mottled purple. Developed by Dr. W. J. Zaumeyer of the U.S.D.A., Tendercrop is the one to grow for local market or processing where quality counts. See prices below.

32 Harris' Shipper

Attractive High Yielding, Round-Oval Pods

This new Harris bean has been well-liked for market and shipping in some areas. Later than Valentine or Contender, it matures over a longer period but is easier to pick by hand than Harvester. Vines are vigorous, heavy-yielding, and they hold the pods well up. The 5½-in. pods are nearly round, straight or slightly curved, slim and smooth and the color and appearance are excellent. Seed dark purplish brown.

Our seed this year is below standard germination but extra amounts will be furnished to compensate. It should be sowed at a higher rate to produce normal stands. See prices below.

22 Contender

A Standard Oval-Podded, Fresh Market Variety

Still widely grown for market and shipping, Contender is earlier than Harvester or Harris' Shipper and has dwarf compact vines that are easy to pick. It is a heavy yielder and is resistant to common bean mosaic.

The thick oval pods are often very long (5½ to 7 in.), smooth and attractive, with a marked tendency to be curved. They are meatier and of better eating quality than Resistant Valentine, yet hold up well for shipping. Seed light tan or buff. See prices below.

34 Harvester *(New)*

Productive, White Seeded, Dual-Purpose Type

Only recently introduced but already a leading round green bean for shipping, Harvester is adapted from Florida to the Northeast and usually brings premium prices on the market. It can also be used by canners if well grown and picked in the smaller sizes before too much fiber develops.

The vines are tall and erect, carrying the pods well up in a concentrated set, fine for mechanical harvesting. The smooth round pods are 5½ to 6 in. long, round and straight with an attractive medium green color. Their appearance is excellent and they ship well. Harvester matures fairly late but with a high seeding rate (70-90 lbs. per acre) and plenty of fertility and moisture, it is an excellent yielder. Pure white seed but normally germinates well. See prices at left.

HARVESTER
Handsome pods—a superior shipper.

Prepaid to 5th Zone from Rochester
(Approximately 1000 miles. See inside front cover.)

BEANS—*Continued on next page*

RESISTANT CHEROKEE

HORTICULTURAL AND POLE BEANS

WAX-PODDED BUSH BEANS

66 Resistant Cherokee (New)—*Adds Mosaic Resistance to Superior Market Type*

Resistance to common bean mosaic has now been added to the leading oval wax to make it even better than ever. All its superior qualities have been retained – its dependability and productiveness, the smooth clean look of its pods and their uniform shape, and it has even greater vigor than the original. Pods are 5-6 in. long, nearly straight with clear light yellow color and good quality. For market, Resistant Cherokee is the oval wax bean to grow. See prices below.

43 Kinghorn Wax—*Round Slender Pods—Rich Golden Color*

Now the leading round wax bean, not only for processors but also for market. A pure white-seeded bean, Kinghorn has proved highly dependable and productive. The vigorous, upright vines bear smooth, attractive, full-rounded pods, 5 to 6 in. long, meaty and of creamy golden color. High quality. See prices below.

28 French Horticultural—*Harris' Special Strain—Finest Shell Bean*

Harris' French Horticultural is considered by many growers the best bush shell bean to be had. Many years of painstaking selection in our crops have produced a strain that is outstanding for the uniformity and striking appearance of its pods.

The vigorous vines are of semi-runner habit, and on moist heavy land the runners are sometimes quite long. The pods are uniformly long and attractive, nearly straight and brilliantly splashed with scarlet. The large beans show red stripes as they mature. See prices below.

Prepaid to 5th Zone from Rochester (Approximately 1000 miles)	1 lb.	5 lbs.	15 lbs.	25 lbs. or more @

FORDHOOK U. S. 242—*The best bush lima.*

LIMA BEANS

26 Fordhook U. S. 242—*Uniform—Heavy Yielding—Dependable*

Fordhook U. S. 242 is the best and most widely grown bush lima. It has proved itself more dependable, more productive and more profitable than the old Fordhook, and it consistently sets big crops of fine beans even under adverse conditions, such as hot, dry weather. The large, vigorous plants produce heavy yields from the first picking right through till frost.

The pods are remarkably uniform – every one is good sized, nearly straight and closely filled with 3 or 4 choice, thick beans. The fine shape and size hold up even on the late sets, and the quality is excellent. *Treated seed.* See prices below.

HARRIS' FREE DOUBLE-TREATMENT GUARDS BEANS AGAINST MAGGOTS AND ROT
Our Captan-Dieldrin treatment permits earlier planting, gives better stands and fine crops. All our bean seed is treated at no extra charge.

BEETS

Sow about 10-12 lbs. per acre; up to 20 lbs. for canning beets where small sizes are desired.

219 Early Wonder, Stays Green

An Excellent Early Bunching Beet

This attractive new strain is offered in place of our Crosby Green Top, especially for early plantings. Early Wonder, Stays Green, is a vigorous grower reaching bunching size early. The large tops have broad leaves, somewhat waved and ruffled, and the color is dark green, holding better than most beets but not as well as our Crosby Green Top under adverse conditions.

The roots are smooth at the early bunching stage, rounded or slightly sloped to the tap root. Color is generally good, but may show rings in hot weather. The flesh is tender and of fine quality. A desirable early strain to grow in place of Crosby Green Top. See prices below.

215 Detroit Dark Red

Harris' Special Strain—Outstanding for Color and Shape

An excellent beet for late summer and fall trade, both for market and canning. It has a smooth skin and uniform globe shape, and the color is a rich deep red throughout. Harris' Special Detroit Dark Red is a vigorous large-topped strain which is popular for busheling and much in demand by growers for processing.

We have grown and selected this strain for many years on our farms, and under Eastern conditions, it gives consistently good performance. It is a big yielder with fine appearance, deep color and excellent quality. See prices below.

	¼ lb.	1 lb.	5 lbs. or more @	25 lbs. or more @

DETROIT DARK RED, Harris' Special Strain—*Uniform, smooth, refined.*

211 Crosby Green Top

Harris' Famous Bunching Strain in Short Supply

We believe our Crosby Green Top is one of the finest strains grown for bunching but regret that supplies this year are far short of our customers' requirements. Early Wonder, Stays Green, offered above, is the best available substitute we know.

Crosby Green Top has smooth, uniform, refined roots with deep red color and fine tap roots and makes a handsome bunch. Its great advantage is the ability of the smooth-leaved, glossy tops to hold their fresh green color even in cool weather. We hope to have ample supplies for 1963. (Limit 5 lbs.). See at left.

BROCCOLI

1 oz. produces 3000 to 4000 plants.

234 Waltham 29

Fine Big Heads for Fall Market

74 days. A uniform heavy-yielding type, the most widely grown for fall crop in the East. The vigorous plants are short and stocky and mature very evenly. They produce large, heavy center heads, of dark blue-green color and with evenly developed curd. When these are cut, the strong side shoots bear good sized, tight heads, excellent for freezing or market.

Not recommended for spring or summer crops, when Green Mountain is preferred, but excellent in the fall, especially in the Northeast and along the Atlantic Coast. Developed by Dr. Young in Mass. Be sure your soil has adequate boron.

Oz. 70c; ¼ Lb. $1.85; Lb. $5.50; 5 Lbs. or more @ $5.00 per Lb.

WALTHAM 29—*The outstanding fall broccoli.*

"We have been using your seeds ever since we started in business back in 1932. We have always found them true to name and dependable."

S. M. Lehigh and Sons
Hanover, Penna., Dec. 19, 1961

233 Green Mountain—*Early—Productive*

60 days. Fine early strain, well-liked in many areas for both market and freezing. The bluish-green center heads are fairly small-budded, and have branched stems that may be easily divided for the freezers. Lateral shoots develop rather slowly but the type is good. Matures early, adapted especially for spring and summer crop. Plants uniform in type and very productive.

Oz. 75c; ¼ Lb. $2.10; Lb. $6.00; 5 Lbs. or more @ $5.50.

CATSKILL
Fine big sprouts—a dependable strain.

BRUSSELS SPROUTS

1 oz. produces 3000 to 4000 plants.

236 Catskill

Heavy Yields of Fine Large Sprouts

95 days. Introduced by us many years ago and now the standard variety in many sections. The plants are quite dwarf, compact and uniform and they set heavy crops of large firm dark green sprouts, far more productive than the older kinds. Catskill is recognized as the most dependable kind to grow.

Ours is the true originator's strain, carefully selected for good-sized, well-wrapped sprouts that pick easily and it is preferred by expert growers.

¼ Oz. 50c; ½ Oz. 85c; Oz. $1.50; ¼ Lb. $5.25; Lb. $18.00.

238 Jade Cross

F_1 Hybrid—All-America Winner

90 days. The first hybrid brussels sprouts ever offered, outstanding for its ability to set firm sprouts on a tall plant under a wide range of conditions. It is vigorous and highly productive and the sprouts are well-wrapped, attractively colored and of high eating quality. Developed by Japanese plant breeders, it grows 6 in. taller than Catskill and the sprouts are not quite so large or so tightly packed on the stem but are ready a few days earlier. Try it this year.

¼ Oz. $1.25; ½ Oz. $2.00; Oz. $3.75; ¼ Lb. $12.50; Lb. $37.50.

MARKET TOPPER—*August De Coninck admires the fine type of this new Harris hybrid.*

CABBAGE

Oz. produces 3000 plants in open ground, 4000 in frames. ¼-½ lb. per acre.

278 Market Topper *(New)*

Harris' Early Hybrid for Market and Shipping

Originally tested as C2A and distributed in a limited way the past two years, Market Topper is a second-early hybrid cabbage of our own development. It shows great promise in many areas for market cabbage growers.

Market Topper matures a week or so later than Golden Acre, about with Copenhagen, and stands well without bursting. The plants are large and vigorous with bluish-green color and the heads are medium-sized, round or slightly flattened, solid, well-wrapped and of excellent shipping type. The heads are firmer and the color is somewhat more bluish than the usual domestic cabbage in this season. It has excellent hybrid vigor and we recommend it. See prices below.

Note: Stock may not be 100% hybrid. Approximate percentage of inbreds will be indicated on package.

MARKET WINNER and MARKET MASTER

Seed supplies of these popular Harris' hybrids are very short for 1962 and are already sold out. We are now attempting to test these and other hybrid cabbages for purity and type in the greenhouse and in the South before shipping the seed. As this catalog goes to press, it is still too early to judge the 1961 crops, but growers with seed on order will be advised if there is any difficulty.

273 Greenback Y. R.

Popular for Midseason Market

Excellent for both market and long distance shipping, Greenback is widely grown for summer and fall crops in the North and along the East Coast. Vigorous, uniform plants are short-stemmed and fairly compact with a fine dark-green color and ruffled or wavy leaves. The heads are round to slightly deep, solid and well-colored. Medium size and superior quality, resistant to yellows, stands cold weather and packs well. See prices at right.

271 Golden Acre Special

Excellent Early Strain

This finely bred special Harris strain is so uniform, attractive and dependable that it has become the first choice of expert growers. It is early with compact plants permitting close spacing, and a large proportion of the heads mature at one time. They are round in shape, firm, medium-sized and of excellent quality. Not a long-standing type but holds better than many extra-early strains and for both roadside stands and larger markets it is very popular. See prices at right.

GOLDEN ACRE SPECIAL—*Finest early variety.*

		Oz.	¼ lb.	lb.	5 lbs. or more @
240	**BADGER BALLHEAD. (98 days.) Yellows Resistant Danish Type.** Popular yellows resistant Danish cabbage for market and shipping. Small to medium-sized heads, round or deep globe with fine blue-green color. Outer leaves strongly attached and give good protection in shipping. For late summer and fall use.	$ .80	$2.40	$6.50	$6.25
241	**BADGER MARKET. (69 days.) Small Plants and Heads.** Excellent second-early cabbage for rich land and muck. 281	**MARION MARKET. (77 days.) Yellows Resistant.** Larger and a little later than Copenhagen and adapted for main crop market and kraut. Produces round solid heads.	.70	1.80	5.50	5.25
285	**PENN STATE BALLHEAD. (100 days.) True Stock.** A heavy-yielding Danish cabbage, widely grown for late crop, kraut and market. Medium to fairly large heads, broad, firm and uniform. A good keeper. Not yellows resistant.	.70	1.80	5.50	5.25
290	**RED ACRE. (76 days.) Popular Red Cabbage for Market.** A fine uniform strain of red cabbage with fairly compact plants and small deep round hard heads of excellent color.	.80	2.45	7.00	6.75
293	**VANGUARD II. (72 days.) New Early Savoy.** Where customers want top quality, try this early savoy. Heads small, bright green, moderately savoyed, exceptionally tender, delightful mild flavor. Plants compact, very early.	1.00	3.25	10.00	9.50
291	**RED DANISH. (97 days.) Dark Red Color, Good for Storage.** This firm, deep-colored, round-headed strain is excellent for late crop. Heads 4-6 lbs., solid, store well.	.80	2.40	6.50	6.25
296	**WISCONSIN COPENHAGEN. (72 days.) Yellows Resistant.** Resistant Copenhagen Market strain with deeply rounded, solid heads of good color and proper size for market, 3-4 lbs. Ready 7 to 10 days after Golden Acre. For summer or fall.	.70	1.80	5.50	5.25
294	**VERY EARLY RED. (72 days.) Special Early Stock.** Try this for first early red cabbage from greenhouse transplants. Plants and heads smaller than Red Acre, uniform and quick growing in spring.	1.20	4.25	....	....
282	**CHINESE CABBAGE—MICHIHLI. (80 days.)** **25 Lbs. or more @ $2.75** Makes uniform tall cylindrical heads, 4 in. thick and 18 in. high. Dark green leaves, heads blanch well, crisp and tender. Sow in July or August, 1 to 1½ lbs. per acre.	.45	1.10	3.25	3.00

277 Harris' Resistant Danish

Vigorous Late Hybrid

Developed to meet the need for a good Danish cabbage that could be grown on yellows-infected soil, this hybrid has proved highly successful in many cabbage sections. It is a short-stemmed variety but has plenty of vigor and makes larger heads than Market Master, maturing about ten days later, or in season with several main crop Danish strains. It is a few days earlier than our 255 Danish Special.

The heads are medium-sized, bluish-green, round and solid with large wrapper leaves. They are suitable for shipping and some growers use them for storage. In general, an excellent Harris cabbage, but we suggest early ordering as we do not have enough seed to meet the demand. See prices on page 4.

HARRIS' RESISTANT DANISH—*True hybrid, very productive, fine, firm heads.*

HARRIS' SPECIAL DANISH—*The best standard Danish.*

255 Harris' Danish Ballhead Cabbage—*Special Strain*

Uniform—Solid—Superior Keeper

Our Special Danish Ballhead is now generally recognized as the standard late cabbage in New York and some other areas. The medium-sized, firm, well-colored heads are just the right type and it is grown for summer and fall market as well as winter storage. The short stemmed, compact plants produce hard round heads with good wrapper leaves and attractive blue-green color.

Its vigor and solidness make our Danish a heavy yielder, yet it is not too large for market and shipping. In the fall, it stands well without splitting and it is an exceptional keeper, holding its color and appearance better than most strains. For a fine firm Danish cabbage, grow Harris' Special. See prices on preceding page.

All our cabbage seed is carefully and thoroughly
HOT WATER TREATED
at no extra charge—to prevent seed-borne black leg or black rot.

CAULIFLOWER

One oz. produces 2-3000 plants in open ground or 4000 in frames.

339 Snowball Imperial—*The Finest Strain*

Snowball Imperial, a highly successful Harris introduction, is regarded as the leading Snowball or Erfurt strain on the market today. Under all normal cauliflower-growing conditions, it excels others in quality, color and uniformity. Under ideal conditions, it cuts out practically 100% perfect heads, deep and solid with snow-white curds.

The stocky plants have an abundance of jacket leaves giving excellent protection to the medium-sized heads. Ready to cut fairly early, it matures over a short period, an advantage for cauliflower specialists.

The consistently superior color and uniformity of Snowball Imperial make it our most highly recommended variety, outstanding in Florida, Long Island and Michigan and well adapted all over the East. Be sure to plant some this year. See prices below.

SNOWBALL IMPERIAL—*Uniform, snow white heads of finest type.*

340 Snowball, Perfected Strain

Dependable Stock

Long the standard midseason cauliflower and still very popular for its vigor and longer harvest period. The heads are large and white with a fine deep curd. The robust plants provide good leaf coverage, and since they mature at different times the crop is more easily handled by the small grower. Our stock is uniform and dependable. See prices at right.

All our Cauliflower Seed is HOT WATER TREATED, at no extra cost to you, for protection against black-leg and black rot.

342 Snowball 25

Vigorous Later Type

This rugged strain of Snowball cauliflower has also proved one of the very finest obtainable and has given great satisfaction. It is a little later than Snowball Perfected and has a rather long harvest period which is preferred by many growers. The plants are robust and leafy and produce deep smooth heads, extra heavy and solid. Under a wide range of conditions, Snowball 25 cuts a high percentage of No. 1 heads. Prices at right.

GOLD PAK
Superior type for bunching and packaging.

307 Gold Pak

The Ideal Long Slim Carrot

More growers every year tell us that Gold Pak is the best carrot they have ever grown for bunching and packaging. The tops are short, dark green and strong, and the roots are long, trim and slender, just what the buyers want. The outside color is deep orange and the interior is bright orange with small cores. Exceptionally uniform, well-shaped and smooth, even when left a long time in the field. Roots are 8½ to 10 in. long, nearly cylindrical, very attractive. Adapted on both muck and upland. See prices below.

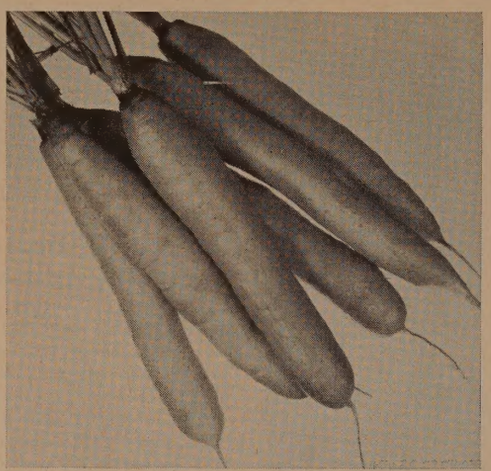
CARROTS

An ounce plants about 300 feet of row.
Sow 2 to 4 lbs. per acre, depending on the width of the rows.

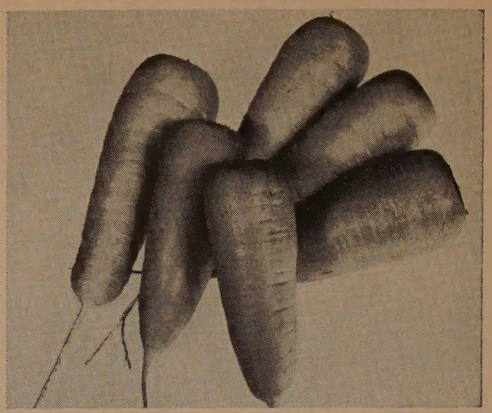
315 Nantes—Long Strain

Handsome, Glossy Roots—Best to Eat

Still the best quality carrot and highly popular for market. Our strain is longer than most Nantes and nearly cylindrical with a slightly pointed tip, fine for bunching. Noted for its smooth waxy surface, rich orange color and fine-grained, sweet, tender flesh. Tops short and small. See prices below.



NANTES, LONG STRAIN
High quality, fine appearance.



ROYAL CHANTENAY—*The leader for processing.*

321 Royal Chantenay

Heavy Yields for Processing

Here is the carrot that processors want—longer and more cylindrical than the old Red Cored Chantenay, which it replaces, and a heavier yielder. The smooth even shape with little taper means less waste and the fine deep orange color throughout is ideal for diced carrots, baby food, etc. Popular with both growers and canners, Royal Chantenay is a highly productive, dependable variety that we strongly recommend. See prices below.

328 Waltham Hicolor

Long and Smooth, Beautiful Color

Early, smooth, well colored and extra long, this handsome bunching and packaging carrot is gaining popularity throughout the East. The tops are short but fairly strong and it reaches marketable size well ahead of Imperator Long or Gold Pak. On deep soils the roots grow up to 10 in. long, and they have a clean, glossy surface and a most attractive, rich orange color.

This year we have good supplies of high germinating seed. See prices at left.

CELERY

An ounce of seed will produce about 10-15,000 plants.
It requires 20-30,000 plants to the acre.

370 Green Light, Tall Strain

Outstanding in Fall Crops

We are pleased that we are able to offer once again this popular Green Light selection, which meets the needs of many growers for a taller celery that is longer to the first joint. It has the same erect, compact habit as the Original Strain with many stems but they are somewhat more slender and grow several inches taller. The photo shows the comparison as grown on muck. Use this strain for fall crops only, as it bolts readily in early plantings, but it is recommended as a high quality, firm modern type for late harvest. See prices below.

GREEN LIGHT—*Two wonderful strains.*
⬇ Original Strain (left) Tall Strain (right) ⬇

371 Green Light, Original Strain

A Harris Introduction and the Leading Celery in Many Areas

In the East and Middle West, many expert celery growers say that our Green Light, Original Strain meets their requirements perfectly. They approve its compact, full plants which are well squared at the base, erect in growth and can be handled with practically no breakage.

Stems are numerous, extra thick and well rounded, moderately ribbed, of crisp texture and excellent quality. They hold in prime condition longer than 52-70 and the hearts are good. Not recommended for early planting as it may produce seeders but fine for summer and fall. Use this strain on rich muck, fertile upland or when spacing close. See prices below.

NOTICE: To reduce the risk of seed stalks, grow Green Light plants at warm temperatures, or sow outdoors in late April.

	¼ oz.	½ oz.	Oz.	¼ lb.	1 lb.
358 CORNELL 19. (100 days.) Yellow or "Self Blanching" Long-stalked, smooth-ribbed and deeply rounded. Resistant to fusarium yellows and adapted to both muck and upland. Bolts quickly if started too early.	$ .50	$ .85	$1.55	$5.25	$18.00

CELERIAC—"Knob" Celery

352 LARGE SMOOTH PRAGUE. (120 days.)
This is the standard market garden variety, producing good sized bulbs of finest type.

Oz. 90c; ¼ Lb. $2.90; Lb. $9.50.

CUCUMBERS Sow about 2-3 lbs. per acre.

NEW—F_1 Hybrid Slicers—*Heavy Yields, Disease Resistant, Excellent Type.*

404 Challenger Hybrid *(New)*

Very Early—Photo on Front Cover

Available only in limited amounts previously, Challenger has been welcomed as an outstanding, productive early hybrid of excellent market type. The vines are compact and the fruit set early and in abundance. The cukes are long, slim and smooth with a fine dark green color, occasionally curved but mostly streamlined and attractive.

Challenger has been outstanding in college trials and field tests for earliness, heavy yields and the ability to come through under many conditions. Highly recommended as much superior in type to the older hybrids. Ideal for early transplant crops, fine for direct seeding. Generally field resistant to mosaic. An excellent hybrid. Prices below.

436 Saticoy Hybrid *(New)*

Vigorous, Productive Market Hybrid

Starting to bear a few days later than Challenger, the brand new Saticoy is another heavy yielder of desirable market type. The healthy, vigorous vines are larger than Challenger but not too rank and they produce well under a wide range of conditions. The fruit are of medium length, about 7-8 in., generally straight with slight taper to stem, very attractive in appearance and slow to "jumbo." The rich deep green color extends well over the entire fruit. Saticoy withstands mosaic and is tolerant of downy mildew.

We believe many cucumber growers will find that Saticoy is a dependable, uniform hybrid producing big crops of fine well-colored cucumbers. See prices below.

401 Ashley—*Handsome, Dark Green Slicer*

Ashley is now the leading cucumber in most Eastern and Midwestern sections. Developed by Dr. W. C. Barnes in South Carolina for resistance to downy mildew, it has proved widely adapted and an excellent producer under many conditions. It is early, a week ahead of Marketer, with a splendid deep green color that holds well into the larger sizes. The shape is slim, smooth and streamlined, often with a characteristic taper at the stem. Very attractive. See prices below.

CORN SALAD

393 LARGE ROUND-LEAVED. Dark Green Strain.
Uniformly large and dark green leaves.

Oz. 35c; ¼ Lb. 85c; Lb. $2.50;

SATICOY HYBRID
Heavy yields of finest market type.

430 Marketer—*A Standard Type*

The leader for years, Marketer is still well regarded in many sections. Its fruit are smooth and slender, uniform and trim with a dark green color extending to the blossom end. They average 7-8 in. long, straight and slightly tapered. Flesh is thick with a small seed cavity. Unfortunately, Marketer lacks disease resistance and is being displaced by the new hybrids and Ashley. Prices below.

ASHLEY—*Beautiful dark color.*

439 Spartan Dawn *(New)*

F_1 Pickle—An Amazing New Development

An important break-through from Dr. C. E. Peterson of Michigan State, this is the first commercial hybrid pickle with the *gynoecious* or all-female character. The compact vines tend to produce a female flower or tiny pickle at every node. If pollinated, these develop extra early crops of the higher priced small pickles.

Spartan Dawn resists scab and mosaic but not mildew, anthracnose, etc. It requires the best growing conditions for full performance but is capable of extraordinary early yields. Acceptable for processing, fairly short, medium green, often tapered to stem.

The hybrid seed will be blended with 10% of the male parent for pollination but should be grown next to a standard type. More information and cultural suggestions available on request. See prices at left.

SPARTAN DAWN—*Fred Rath notes the amazing yield of fully mature fruit in our seed crop.*

SWEET CORN

One pound of seed will plant 800-1000 ft. of row; 10 to 12 lbs. will plant an acre.

NORTH STAR—*Amazing vigor in early plantings.*

EXTRA REASONS FOR GROWING HARRIS' SWEET CORN:

All these money-saving services are FREE.

1—Double strength seed treatment for better stands (Fungicide only).

2—Graded seed for accurate planting.

3—Planter plate suggestions (on orders over 5 lbs.).

4—No charge for bags.

5—***Free delivery*** *to the 5th zone from Rochester. (Approximately 1000 miles.)*

131 Northern Belle

Finest Second-Early Hybrid Yet (74 days)

Growers agree: Northern Belle is unrivalled as the best second-early hybrid. A real break-through by Wilbur Scott, our famous plant breeder, it is a sweet corn of the most desired type, with large, extra-attractive ears and the glossy, narrow kernels markets are looking for, yet it ripens practically in season with Carmelcross!

Northern Belle is an amazing yielder of beautiful uniform ears, 7½-8 in. long with a bright appetizing appearance that sells on sight. There are 14 to 18 rows of closely packed, rounded kernels that fill evenly to the tips and the quality is fine for this season, sweet and well-flavored. The 6-foot plants are remarkably stiff-stalked and erect, highly resistant to lodging. Husks are smooth and bright.

Quickly growing in popularity, Northern Belle is already replacing Carmelcross and other hybrids of its maturity on markets all over the East and Middle West. It it a truly outstanding development in the second-early class and most enthusiastically recommended. See prices on next page.

NORTHERN BELLE—*Taking the lead in Carmelcross season.*

130 North Star—*Still the Leader for Early Market (67 days)*

For twenty years, Harris' North Star corn has been recognized as the finest early variety. Developed and sold only by us, it has the size, appearance, quality and yield to bring profitable returns at the start of the season.

North Star is bred for early planting and makes a rapid vigorous growth even under tough, cold weather conditions. The sturdy plants bear quantities of large, handsome ears, dark green in color with plenty of blades or flag leaves.

The kernels are creamy gold, tender and sweet, if picked young, and the ears are fully seven inches long, mostly 12-rowed and filled right to the tip. The large thick husks make them fresh and attractive looking. A wonderful hybrid for all growers of early corn. Prices on next page.

Caution: North Star is not resistant to wilt (Stewart's disease) but if necessary, it can be protected by a spray program. Avoid 2,4-D for weed control—most other corn weed killers are satisfactory.

SPRING GOLD—*Very attractive new early hybrid.*

118 Harris' Gold Cup

Wins Highest Approval (80 days)

See Photo on Back Cover

Record-breaking yields, choice quality and excellent market appearance combine in Gold Cup to win the commanding position in important sweet corn growing areas. It finally gives the customer what he wants—a really fine eating corn. Sweet, tender and delicious, it is often sold by name at premium prices and it holds well in prime condition. It is just as popular with chain store buyers as it is for critical roadside trade.

Another brilliant achievement of our plant breeders, Gold Cup produces trim, uniform, medium-sized ears, 7½-8 in. long, tightly filled with 14-16 rows of bright glossy narrow kernels. The 6½-7 ft. plants are erect and sturdy with few tillers and the smooth husks are dark green and fresh-looking. Matures in early mid-season and outstanding for successive main crop harvest all summer and into the fall.

On moist fertile soils, Gold Cup will frequently produce two good ears per plant. Where size is important, provide 10-12 in. spacing between plants. Prices on next page.

137 Spring Gold *(New)*

Early—Fine Grained—Better Quality (67 days). Available for Trial Only

For years we have been trying to develop a smaller kerneled, more modern ear in the North Star season. Now "Scotty" and his plant breeders have produced Spring Gold, a new hybrid for trial in 1962.

Not quite as rugged as North Star for early planting, Spring Gold matures about the same time, with less husky plants, sometimes with bushy tillers. In the husk, the ears look considerably smaller than North Star but are smooth, slender and attractive with good color. The husked ears are outstanding in this season, nearly 7 in. long, slightly tapered, well-filled with 12, 14 or 16 rows of neat, tight, golden kernels. They taste as good as they look, tender with a sweet delicious flavor.

Plant Spring Gold on good soil, for roadside stands or local markets where quality is more important than size.

1 Lb. 95c; 5 Lbs. $4.25. (Limit 10 Lbs.)

GOLD EAGLE—*Excellent appearance, fine quality.*

113 Gold Eagle *(New)*

Larger Ears than Gold Cup (79 days)

A worthy companion to our tremendously popular Gold Cup, the new Gold Eagle is preferred in some sections of the Northeast and Midwest for its fine appearance and somewhat larger ears. The plants are slightly taller, pink-tasseled instead of white, sturdy and erect with good yield potential. Under favorable conditions the husks are smooth and dark with good flags and the ears are larger, measuring ¼ to ½ in. longer and slightly thicker. The kernels are small, bright and rounded with fine quality. Outyields FM Cross and has proved a handsome dependable market corn. Matures with Gold Cup or a day earlier. Highly recommended. See prices on next page.

139 Surecrop

Late Hybrid for Shipping (86 days)

This tall, vigorous midseason or late corn is popular for shipping and city markets. Plants about 7 ft., erect with tall tillers, largely double-eared. Ears in husk have smooth tapered shape with long tip coverage and good flags. There are 14 to 16 rows of small kernels, filling the tip well. We regret that our seed crop was very short this year and we are already sold out for 1962.

145 Wonderful—*Top Quality Home Garden Type (82 days)*

For growing in the garden and for delicious eating at the table, Wonderful is the most popular corn we offer. It has large plants with tall tillers and produces long (8-9 in.), somewhat tapered ears. They do not mature uniformly for market but they are *wonderful* to eat, exceptionally tender, sweet and well-flavored. The row count is uneven and the tips are scrambled so only quality markets or stands will appreciate this type.

Unfortunately our seed crop is extremely short this year and we will be sold out very early; after that we will supply in its place a similar hybrid of equal quality, Seneca Chief, about the same season but with more slender ears. See prices below.

104 Big Chief *(New)*

A Very Large Eared, Late Hybrid (87 days)

This big husky late corn is suggested for markets where size is important. Several days later than NK 199, better-looking husks, more flags, ears pollinate more fully. The huge ears have fairly narrow, deep kernels. Some growers report it holds up better than Iochief for late fall crops. See prices below.

***THICK KERNELS.** These produce vigorous seedlings and excellent crops. Planter plate tests show they can be sowed as accurately as the flats. Supplied on orders under 10 lbs. and a bargain in larger quantities.

122 Iochief

Fine-Grained, Wilt-Resistant (85 days)

Still one of the most popular main crop hybrids, Iochief makes a big attractive ear with 14 to 20 rows of narrow, close-packed, deep kernels which have a bright, appetizing look and a clear golden color.

The ears are large, 8 to 9 in. long, slightly tapered and well wrapped in a good husk, and they mature just after Golden Cross. The plants are highly wilt resistant and drouth tolerant, and the husky well-rooted stalks grow erect with few suckers. When planted close, they produce a heavy tonnage per acre.

A fine main crop corn, Iochief's only fault is that it is hard to pick. Prices below.

IOCHIEF—*Large ears, narrow kernels.*

124 Illinois 14 x 11 *(White)*

Narrow-Grain Evergreen Type (94 days)

The popular large-eared late white corn. Big 8-in. ears with 16-20 rows of deep, narrow kernels, pearly white, with fine tenderness and flavor. Husks long, covering the tip well. Large, vigorous plants. Often profitable for fall crops. See prices below.

ORNAMENTAL CORN

150 INDIAN ORNAMENTAL CORN. (110 days.)
Handsome 7-9 in. ears with an interesting variety of decorative colors, always popular in the fall. An excellent strain.
Lb. 90c; 5 Lbs. $3.95; 10 Lbs. $7.30; 25 Lbs. or more @ 65c Lb.

151 STRAWBERRY CORN. (105 days.)
Tiny ears of pop corn, only 2 in. long, mahogany red in color, very charming for table decorations.
½ Lb. $1.40; Lb. $2.25; 5 Lbs. $10.00.

POP CORN

8 lbs. will plant an acre.

	1 lb.	5 lb.	10 lb.	25 lbs. or more @
146 GOLDEN PEARL (Hybrid). (100 days.) Small rounded yellow kernels, fine popping quality. Big yielder.	$ .75	$2.45	$4.30	35c
149 WHITE CLOUD. (95 days.) Best of the early, high quality white types. Ears short, plump, well filled with narrow deep kernels that pop well and are delicious to eat. Vigorous, good yielder.	.85	3.70	6.80	60c

EGG PLANT An ounce produces 2-3000 plants.

462 Black Magic Hybrid—*Hybrid Vigor Gives Wonderful Crops*

Growers report that this remarkable F_1 hybrid is the best egg plant they have grown, early, dependable and highly productive. The vines are fairly tall and spreading and so husky that most fruit are held off the ground. The medium-sized, oval fruit have an excellent glossy dark color before fully grown and the vines produce continuously over a long period, from early until frost. See prices below.

		Oz.	¼ lb.	lb.
461	**BLACK BEAUTY. (80 days.) The Standard Variety.** Fruit are broad oval in shape with dark purple color. A popular variety but quite susceptible to verticillium wilt and now being replaced by Black Magic Hybrid.	$ .85	$2.50	$7.50
462	**BLACK MAGIC HYBRID. (72 days.) Harris' Vigorous F_1 Hybrid. See above.** ⅛ Oz. 85c; ¼ Oz. $1.50; ½ Oz. $2.60	4.50	16.50	55.00
464	**FORT MYERS MARKET. (85 days.) Deep, Glossy Purple-Black.** Fruit 9-10 in. long, 6 in. diameter, slightly tapered. Vines tall, fruit held well up. Preferred type for market in longer season areas.	1.00	3.25	10.00

←BLACK MAGIC HYBRID—*Big yields, beautiful fruit.*

ENDIVE An ounce sows about 100 feet, 2 to 3 lbs. per acre.

473 Full Heart Batavian—*Dark Green Escarolle*

Our customers have been well pleased with this excellent strain, the most popular endive for northern crops. It is the true deep-hearted escarolle with broad green leaves and full compact hearts, packed with thick, slightly crumpled leaves and easily blanched. The quick-growing plants produce large heads of finest quality and are vigorous and dependable. See prices below.

479 Salad King —*Large Curled Type—Stands Warm Weather*

A vigorous, large-growing strain that performs well under difficult conditions. It does not make a deep heart but is more resistant to tip burn, slower to bolt and stands up better in hot weather. It has done well in Florida and withstands fall rain and early frost. The dark green, white ribbed leaves are not as finely cut as Green Curled and grow half again as large. A very rugged strain. See prices below.

		Oz.	¼ lb.	lb.	5 lbs. or more @
475	**FLORIDA DEEP HEART. (Escarolle Type.) (85 days.)** Very similar to Full Heart but with slightly smaller frame and somewhat more erect habit. Some growers on Eastern muck and in Florida find it less susceptible to bottom rot. Uniform type with thick deep hearts.	$ .35	$ .80	$2.25	$2.15
473	**FULL HEART BATAVIAN. (Escarolle.) (90 days.) See above.**	.35	.80	2.25	2.15
477	**GREEN CURLED. (95 days.) Also called "Chicory." Green Ribbed.** Leaves finely cut and curled. Exceptionally uniform with a fine heavy heart. Vigorous grower, light green midribs.	.35	.80	2.25	2.15
478	**GREEN CURLED PANCALIER. (95 days.) Pink Ribbed.** This strain is somewhat flatter growing than Green Curled and has pink-colored midribs. It does best on rich soil and is a favorite of some market gardeners because of its fuller, heavier hearts which blanch very easily.	.35	.80	2.25	2.15
479	**SALAD KING. (98 days.) For Warm Weather. See above.**	.40	1.10	3.15	3.00

French Endive (Witloof Chicory)—see under Chicory on page 7.

VATES KALE—*Uniform, tight curl.*

DILL

459 BOUQUET.

70 days. This is the best dill to grow. Erect vigorous growth. 2½-foot plants with stiff stems and distinct blue-green color. Flavor is strong and pungent.

Oz. 35c; ¼ Lb. 80c; Lb. $2.25; 5 Lbs. or more @ $2.15 per Lb.

KALE *Two pounds will sow about one acre.*

487 VATES or Dwarf Curled.

55 days. By far the best type. Uniform, finely curled leaves of splendid dark bluish-green color. Does not turn yellow in cold weather. From the Virginia Truck Experiment Station.

Oz. 35c; ¼ Lb. 90c; Lb. $2.60; 5 Lbs. or more @ $2.40 per Lb.; 25 Lbs. or more @ $2.25 per Lb.

FENNEL *1 oz. plants 100 feet; 3 lbs. per acre.*

482 MAMMOTH.

This later-maturing strain is preferred for main crop as it holds up well. Plants erect, fairly large thick bulbs.

Oz. 35c; ¼ Lb. 85c; Lb. $2.50; 5 Lbs. or more @ $2.25.

HERBS for Flavoring, Etc.

		Oz.	¼ Lb.	Lb.
931	**BASIL. Large Leaved**	$ .60	$1.65	$5.00

949	**THYME**	1.50	4.75	...

KOHL RABI *1 oz. sows about 200 ft.*

492 EARLY WHITE VIENNA. *A Fine Strain.*

55 days. An exceptionally uniform, early short-topped strain of this popular variety, adapted for growing under glass as well as outdoors. The tops are small with few leaves and the bulbs mature quickly. Nearly round shape, very even size, excellent quality.

Oz. 45c; ¼ Lb. $1.20; Lb. $3.50; 5 Lbs. or more @ $3.25.

FULL HEART BATAVIAN ENDIVE

GARLIC

Separate the bulbs into flakes or "cloves" and set out like onion sets. Bulbs for planting:

Lb. 80c; 5 Lbs. or more @ 75c per Lb.; 25 Lbs. or more @ 65c per Lb., postpaid.

LEEK *An ounce sows about 200 feet of row.*

498 SWISS SPECIAL.

A large, vigorous and attractive strain with long, broad, clear white stalks of fine type and quality.

Oz. 70c; ¼ Lb. $2.00; Lb. $6.00; 5 Lbs. or more @ $5.50 per Lb.

497 LOHMANN'S SELECT.

A winter-hardy strain used on Long Island and in North Jersey. Tops hold their blue-green color much better in cold weather than Swiss Special but stems are not quite as long and thick, and show more bulbing. Try this strain for wintering over.

Oz. 70c; ¼ Lb. $2.00; Lb. $6.00; 5 Lbs. or more @ $5.50 per Lb.

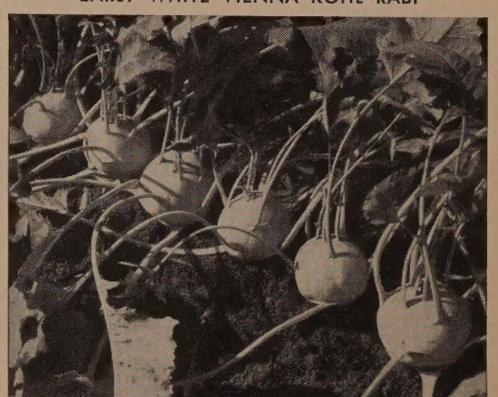
MUSTARD *An ounce will sow about 300 feet.*

594 GREEN WAVE. *Best Fringed Mustard.*

45 days. More deeply frilled, upright and uniform than the popular Southern Curled type and stands a week longer. Critical growers consider it the best curled mustard available.

Oz. 20c; ¼ Lb. 50c; Lb. $1.35; 5 Lbs. or more @ $1.25 per Lb.; 25 Lbs. or more @ $1.15.

EARLY WHITE VIENNA KOHL RABI



LETTUCE

Sow 1 to 2 lbs. of seed per acre.

523 Great Lakes 659, M.T.

Medium-Sized, Solid, Round Heads

We are pleased to offer mosaic-indexed seed of this popular strain, widely used on muck and upland in the North and East. Heads smaller and harder than the original Great Lakes but larger than Cornell 456. Heavily blistered, deeply cut leaves are dark green and wrap closely around the heads. Not as firm or as tip burn resistant as 456 or Oswego in hot weather but well adapted for late summer and fall crops. An excellent strain. See prices below.

529 Oswego *(New)*

For Summer Crops on Muck

Developed by Dr. George Raleigh of Cornell, Oswego is an important new lettuce for N. Y. muck. It matures early with rather small-framed, compact plants and makes firm, well-folded heads with very short cores. In summer on good deep muck it is outstanding and is relatively free of tip burn and rib discoloration. Probably too small for most upland crops. Seed supplies very limited – sold out for 1962.

535MT Parris Island Cos M.T. — *Dark Green, Uniform, Rugged*

Mosaic-indexed seed of this excellent dark green Cos is now available to make it more dependable than ever. Its large uniform heads are of most desirable type, and it is tolerant of mosaic and a vigorous grower. Slightly later than the lighter green Cos, its darker color is preferred on the market. See prices below.

539 SLOBOLT. (48 days.) Long-Standing Grand Rapids Type..... Stands far longer than other loose-leaf types. Thick clusters of curly leaves. Now being tried for greenhouse growing and increasingly popular for outdoors.	.90	2.75	8.25	8.00
540 SWEETHEART. (72 days.) Slower Bolting Butterhead..... A new Boston type for muck or upland, slower bolting, more resistant to tip-burn than other strains. Larger, slightly later than White Boston. Superb quality but does not head hard.	.70	1.85	5.50	5.25
541 SALAD BOWL. (48 days.) Distinctive Loose-Leaf Type..... Attractive loose-leaf variety, long-standing and of fine quality. Notched and curled bright green leaves form a compact rosette. Long-standing even in hot weather. Adapted for packaging.	.70	1.85	5.50	5.25
544 WHITE BOSTON, M.T. (68 days.).....25 Lbs. or more @ $5.00. An excellent strain of the standard White Boston, good-sized and uniform, light green and well folded.	.70	1.85	5.50	5.25
545 WALDMANN'S GREEN. (45 days.)..... Dark green Grand Rapids, developed by John Waldmann of Cincinnati. Makes a vigorous heavy growth with finely fringed and ruffled leaves, rich, attractive dark green color. Recommended for greenhouse and outdoor growing.	.45	1.20	3.25	3.00

PHOENIX GREAT LAKES
An excellent strain for cool weather crops.

534 Phoenix Great Lakes

Uniform, Attractive Strain

An excellent lettuce for upland growing in the Northeast, Phoenix resembles 659, but the plants and heads are slightly larger and the well-crumpled leaves are not as deeply ruffled or fringed. The leaves are darker and the heads are smoother and better colored. It heads hard and evenly and tolerates cold weather very well. Not adapted for summer crops on muck but well-liked for fall crops in many sections. See prices at left.

533MT Pennlake M.T.

Best Early Lettuce for Upland

Upland growers consider our Pennlake the leading early lettuce, and this *mosaic-tested* strain regularly produces the finest of clean, firm heads in spring crops, cutting a higher percentage at one time. Well protected by the rather smooth, dark green leaves, heads are crisp, well-rounded and medium sized, just right for market. Use Pennlake for early crops, both transplanted and field-sown. See prices at left.

M.T.—*Mosaic-Tested Lettuce Seed.*

Now universally recommended by lettuce authorities, mosaic-tested lettuce seed is carefully grown in special areas to assure that it will be virtually free of seed-borne mosaic. It is then checked by growing and examining thousands of seedlings. *"M.T."* is used on the seed only if these approved methods of testing show less than one tenth of 1% mosaic-infected seeds.

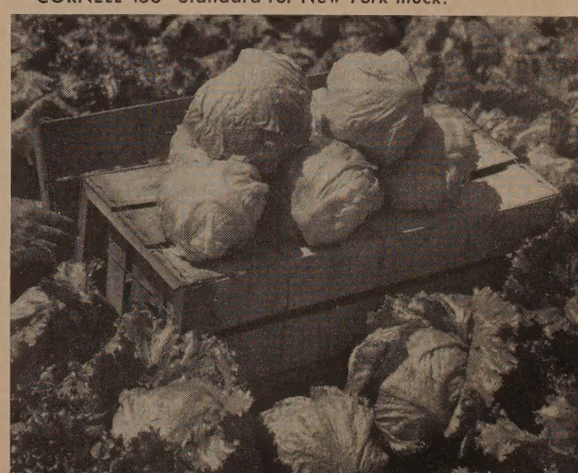
509 Cornell 456, M.T.

Best for Muck—Withstands Summer Heat

Mosaic-tested seed is now available of this standard summer lettuce for muck in the East. It is an unusually hard-heading medium-sized type, resistant to bolting and tip burn, and it produces a high percentage of fine heads even under difficult conditions.

Our strain is noted for its uniformity, even maturity and dependability. Adapted to Eastern conditions, earlier than Great Lakes with an attractive glossy color. See prices at left.

CORNELL 456—*Standard for New York muck.*



HARVEST QUEEN—*Fine quality, very productive.*

MUSKMELONS 1½ to 2 lbs. per acre.

565 Harvest Queen

Our True Originator's Strain of The Leading Market and Shipping Melon

One of Harris' most important introductions, Harvest Queen is rated the finest melon yet developed in many sections. It is a fusarium resistant Queen of Colorado type, slightly earlier and yields better. The oval melons are medium sized, just right for crating and shipping, with a thick ropy net covering the hard rind. They ripen from blue gray to golden yellow. The deep orange, extra thick flesh is fine textured and very firm with a delicious sweet musky flavor. The quality is still excellent five or six days after picking. See prices below.

IROQUOIS
A highly popular variety.

560 Delicious 51

Grow This for First Crop

The standard *early melon,* long famous for its large size and sweet flavor at the start of the season. It ripens a week or more before Iroquois and the round or slightly oval fruit are finely netted and moderately ribbed. The orange flesh is juicy and very sweet. Not a shipping type but popular for stands and local markets. Resistant to fusarium wilt. See prices below.

576 Supermarket *(New)*

F1 Hybrid—High Quality—Excellent Type

Here's a productive new market hybrid of top quality. It matures just after Harper and Delicious and bears over the full season. The oval fruit are medium sized (7 in. long by 6 in. diam.) heavily netted but showing rib marks, and the thick firm flesh is sweet with musky flavor. Resistant to fusarium wilt and downy mildew. A good yielder, highly recommended. See prices below.

DELICIOUS 51
Early, fusarium wilt resistant.

569 Iroquois

Large, Uniform, High Quality

An important market variety in many sections, Iroquois is an excellent larger-fruited type, resistant to fusarium wilt, and very attractive and delicious.

The fruits are medium-large, round to oval in shape with prominent ribs and good netting; the rind is tough and holds up well in handling and shipping. The fine textured, thick flesh is deep orange with consistently high flavor and sweetness. It ripens in midseason and is very prolific. See prices below.

558 DeConinck Bender *(New)*

Large, Well-Netted Later Melon

A private strain selected here in Rochester by the DeConinck brothers, this big main crop melon is worthy of trial. Larger then Iroquois, well netted with prominent ribs. Thick flesh with fine color and flavor but the texture is somewhat fibrous. The vigorous vines are dark green and hold up well but are not fully resistant to fusarium wilt. Prices at left.

563 Harper Hybrid

True F1 Hybrid—Thick Flesh—Best to Eat

Developed by L. F. Ounsworth of Harrow, Ont., this F_1 hybrid is early, productive and resistant to fusarium wilt. Its deep flesh has a delicious tangy flavor that has been acclaimed by customers at roadside stands and local markets.

Fruit are medium sized, round to oval and 5-6 in. in diam., not ribbed or thickly netted like most of our northern melons but smooth and attractive with a fine netting. The shell is firm and the flesh holds its excellent quality several days after picking. See prices at left.

PERFECTION
The market growers' favorite.

PARSLEY *An ounce of seed will sow about 200 feet of row.*

637 Perfection

Vigorous, Long-Stemmed Strain

This handsome parsley is used by more expert growers every year. Earlier and taller than Paramount, it has a brighter green color and longer stems for bunching. Color holds well in cool weather. Recovers vigorously after cutting and the type is becoming standard for market. See prices below.

635 Paramount

Slower Growing but Very Finely Curled

Paramount with its extra tight curl, rich deep green color and uniform growth is still among the most popular varieties. Slightly later and more compact than Perfection, it is more refined, free of flat leaves and does well on rich soil, muck or under glass. See prices below.

	Oz.	¼ lb.	lb.	5 lbs. or more @	25 lbs. or more @
635 PARAMOUNT. (85 days.) Finest Curled. *See above*	$ .35	$ .85	$2.50	$2.40	....

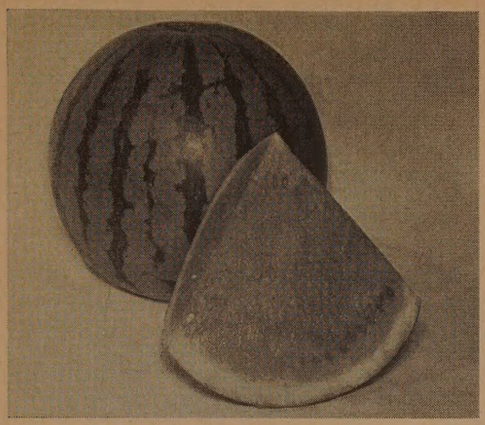
639 PLAIN ITALIAN DARK GREEN. (78 days.) Best Flat-Leaved Type. This is the "celery-leaf" parsley with flat, glossy, dark green leaves, not deeply cut. Erect growth, vigorous, strong flavor. Special strain.	.35	.90	2.60	2.50	2.40
633 HAMBURG. (Heimisher.) (90 days.) Long-Rooted. Grown for its long, well-shaped roots, this strain is vigorous with large tops. Preferred by critical growers. Requires deep, well prepared soil.	.30	.75	2.00	1.90	1.75

WATERMELONS

An ounce of seed will plant about 25 hills; 1½ to 2 pounds to the acre.



SEEDLESS—*Becoming increasingly popular.*

592 Seedless Hybrid 313 *(New)*

Best-Liked Seedless Watermelon

Customers now are showing real enthusiasm for the seedless watermelons, and this latest development is the most popular of its type. The fruit are oval-round and larger than No. 317 (see below), weighing 12-20 lbs. The rind is firm enough to stand handling, attractively striped, and the flesh is crisp, bright red and of excellent quality with the amazing absence of seeds that has won this type its great success. Vines are vigorous and productive and show some resistance to anthracnose. The increasing popularity of the seedless watermelons can mean premium sales for you. See prices below.

	Oz.	¼ lb.	lb.	5 lbs. or more @
578 CHARLESTON GRAY. (96 days.) Main Crop Type. Large, long, high quality gray-green watermelon, excellent shipper. Resistant to anthracnose and fusarium wilt, quite free of hollow heart. Standard for longer seasons.	$ .35	$ .95	$2.75	$2.50
582 HYBRID 103. (Seedy.) *(New.)* (88 days.) Resembling a smaller Charleston Grey, this hybrid has been exceptionally early and productive at Cornell (tested as "No. 13"). Seeds small and black, flesh bright pink-red, high quality.	½ Oz. $2.60	....	....	....	....
583 KLONDIKE. Black Seeded. (95 days.) Top Quality.	.35	.95	2.75	2.50

SUGAR BABY—*Best of the "Ice Box" type.*

587 Sugar Baby

Delicious Sweet, Round Melon

Sugar Baby is a real winner in the "Ice-box" class. Larger and slightly later than the Midgets, it is very uniform, almost perfectly round and averages 7 to 8 in. in diameter. The rind is hard and it stands shipping and handling well. Showing some dark stripes early, it ripens to a smooth, very dark green.

The flesh is extra solid, firm, crisp and fine-textured, bright red with very small brown seeds. The flavor is excellent, sweet and tasty and this superior quality gives it a real place. Highly recommended. See prices at left.

584 Market Midget

Dependable, productive small watermelon with hard rind and solid, crisp flesh that ripens full crops in short seasons. Considered too firm in texture by some, but this may be overcome by leaving them longer on the vines, since their quality will actually continue to improve after they are apparently mature. Oval fruit, 6-7 in. diam., with light green rind. Fine-grained sweet flesh, small dark brown seeds. See prices at left.

ONION PLANTS

15 or 20 crates are needed per acre if set 4 or 5 in. apart in 18-in. rows.

Sweet Spanish—Utah Strain

Use these famous Texas-grown transplants for big yields of large, sweet "jumbo" Spanish onions. Our strain produces heavy crops if set out early, as soon as the soil can be worked. Plants stand considerable frost.

10 bunches .....$4.90 postpaid
Crate (60 bunches—28 lbs.) $12.50 Not prepaid*
4 to 9 crates..... @ 12.00 per crate**
10 crates or more..... @ 11.50 per crate**

F.o.b. Rochester. Strictly net cash with order

Early Harvest *(New)*

Big, globe shaped onions of mild sweet flavor are ready very early from transplants of this remarkable hybrid. Not for storage but excellent for summer sales. Try these Texas-grown plants for extra early crops.

10 bunches .....$5.25 postpaid
Crate (60 bunches—28 lbs.) $13.50 Not prepaid*
4 to 9 crates..... @ 13.00 per crate**
10 crates or more..... @ 12.50 per crate**

F.o.b. Rochester. Strictly net cash with order

Please Note: Our onion plants are sold by the bunch, a handful of plants as pulled in the field. The count is not specified but usually runs between 50 and 110.

Shipping area: We ship only to approved locations in New England, New York, Penna., New Jersey, Ohio and Michigan.

Shipping Season: Usually available early in April, and if weather permits, until May 15th.

*Include postage with order as follows:
2nd zone (up to 150 mi. from Roch.) $1.80 per cr.
3rd zone (150-300 miles from Roch.) 2.10 per cr.
4th zone (300-600 miles from Roch.) 2.60 per cr.

****4 crates or more shipped by express collect.**

ONION SETS

About 18 to 25 bushels of onion sets are required to plant an acre.

Harris' onion sets are clean, firm, well graded and true to type and are used with great satisfaction by many particular growers. We highly recommend them.

980 EBENEZER. Best Yellow Sets. (¾" bar screen). The standard yellow variety, producing marketable bulbs very early. Large, flattened in shape, uniform, and of fine quality.

Peck $2.95, postpaid.
Not prepaid: Bu. (32 lbs.) $5.50; 2 bu. $10.80; 10 bu. or more @ $5.25.

982 WHITE or Silverskin (White Ebenezer). Best for bunching. Medium-sized flat onions. Clear white, fine appearance.

Peck $3.10, postpaid. Not prepaid: Bu. (32 lbs.) $5.75; 2 bu. $11.30; 10 bu. or more @ $5.50.

Please Note: Orders for onion sets may be entered at any time. They will be shipped as soon as we feel danger of freezing is past, and arrival in good condition is guaranteed.

PARSNIPS

An ounce will sow 150 ft. 3 to 5 lbs. per acre.

640 Harris' Model

Smooth White Roots (120 days)

Our Harris' Model is widely known as the finest parsnip of all. It is smooth, tapered and snow white with a minimum of side roots; of good length and proper shape for packaging. Their smoothness is quite remarkable, giving the roots a very attractive appearance and they usually sell for top prices. Growers all over the country demand our true originator's strain both for packaging and busheling.

Oz. 30c; ¼ Lb. 65c; 1 Lb. $1.60; 5 Lbs. or more @ $1.50; 25 Lbs. or more @ $1.40; 50 Lbs. or more @ $1.25; 100 Lbs. or more @ $1.15.

641 All-America

Broad Shouldered—Early (105 days)

Excellent, large, broad shouldered variety that makes a good diameter early. Roots are remarkably smooth and white, quite tapered, fine quality. **Oz. 25c; ¼ Lb. 60c; 1 Lb. $1.50; 5 Lbs. or more @ $1.35; 25 Lbs. or more @ $1.25.**

HARRIS' MODEL—*Smoothest, whitest parsnip.*

EARLY HARVEST
Choice quality, extra early.
(Fine bulbs grown from plants in our trials.)

ONIONS

4 to 5 lbs. of seed per acre for bulbs;
10-15 lbs. for bunching.

606 Early Harvest—*First-Early*

At last we can offer sufficient seed of this extra early, mild flavored onion that has aroused so much interest. It matures ahead of other varieties or hybrids from seed but should be planted early on well-drained muck for best results. Grown from greenhouse transplants (or our Texas plants—see page 13), it makes good big onions long before the Spanish or set onions are ready.

The bulbs are nearly round with small refined necks which cure rapidly. Skin is straw-yellow with few scales and the flesh is as mild and sweet as any onion we can grow in the North. Not a storage type but wonderful for summer sales. Prices below.

TWO INTERESTING NEW HYBRIDS FOR 1962

600 Autumn Splendor *(New)*

In Canada and Northern areas of the U. S. where Autumn Spice is popular, this new hybrid should be tried. It matures several days later but makes more size and often has darker skin color. Adapted for packaging, very firm and a good keeper. Some tests indicate greater production than Autumn Spice but it is not a heavy yielder on N. Y. muck. See prices below.

608 Grandee *(New)*

A large, heavy-yielding hybrid with one Spanish parent, this newcomer has looked better than Treasure in some trials. It is a vigorous, large topped, late onion, probably better adapted in longer season areas like Orange Co. The big bulbs are deep globe, better shaped and darker-colored than Treasure. Quite firm at harvest, but should be sold in fall or early winter. See prices below.

YELLOW ONIONS

		Oz.	¼ lb.	lb.	5 lbs. or more @	25 lbs. or more @
599	**AUTUMN SPICE. (98 days.) For Northern Areas.** Early hybrid for long storage. Medium size, globe shape, small necks. For market and pre-packaging.			Sold Out

WHITE AND RED ONIONS

603	**BELTSVILLE BUNCHING. Strong, Dark Green Tops.**	1.20	3.75	12.25	12.00	....
601	**EASTERN QUEEN. *(New.)* Non-Bulbing Bunching Strain.** An improvement on the regular Japanese Bunching, this strain has been well-liked in some areas. It is a straight smooth white onion with a large erect top, not as stiff as Beltsville but better than Japanese Bunching. Vigorous and uniform, reaches marketable size early. Not adapted for wintering over.	.55	1.65	5.00	4.75	4.50
612	**GREEN BUNCHING GLOBE.** A vigorous bunching strain, selected from Southport White Globe. It has good tops and uniform white stems of excellent type.	.45	1.35	3.80	3.70	3.60
610	**JAPANESE BUNCHING. For "Scallions".** A hardy, non-bulbing type of onion that makes long slim pure white stems and is popular for bunching. Used both for summer crops and wintering over.	.50	1.40	4.25	4.10	3.90
617	**SOUTHPORT WHITE GLOBE. (110 days.)** Makes fine medium-sized bulbs, globe shaped, clear white and good keepers. For bunching, however, we recommend Green Bunching Globe above.	.50	1.40	4.25	4.10	3.90
624	**WHITE LISBON or White Bunch.** Widely grown as an early bunching onion because of its vigor, mild flavor and strong green tops. Tends to bulb early.	.45	1.35	3.80	3.70	3.60
625	**WHITE PORTUGAL or SILVERSKIN. For Bunching.** Early flat, white onions of mild flavor. Excellent for pickling and early green onions, also for sets and for bunching. A very popular variety.	.45	1.35	3.80	3.70	3.60
626	**WHITE SPANISH, Bunching Strain. *See at right.***	.50	1.40	4.25	4.10	3.90
615	**WINTER-OVER. (Formerly called Hardy White Bunching—Schlomann's)** Resembling White Lisbon, this special strain is well adapted for late fall bunch onion crops and excellent to winter over. Hardy and very slow to produce seeders in spring. Tends to bulb quickly if planted for summer crop. Mild flavor.	.45	1.35	3.80	3.70	3.60
616	**SOUTHPORT RED GLOBE. (110 days.) The Best Red Onion.** Large, perfectly round, deep red onion; keeps well.	.70	1.85	5.75	5.50	5.25

622 Treasure

High Yielding Muck Hybrid

Developed by the U.S.D.A. and Cornell, this large, vigorous hybrid combines the seed parent of Empire with a Spanish inbred that boosts production and has given outstanding performance in Orange Co. in 1961. The bulbs are big and round with medium dark scales that adhere well. Treasure is a good firm onion in the fall, but with the Spanish blood we do not recommend it for storage into late winter. See prices at left.

WHITE SPANISH—*Outstanding bunching type.*

626 White Spanish—*Bunching Strain*

Green bunching onions are becoming a more important crop, and this vigorous strain is highly popular for spring, summer and early fall crops. The White Spanish type means high quality and slowness to bulb and this is especially selected for strong tops and uniform, long white stems. Now the leading strain with our customers and recommended for muck and upland. See prices at left.

620 Sweet Spanish—Utah Strain

Large, Mild Onions of High Quality

Sweet Spanish makes bigger onions of milder flavor than other kinds and is more tolerant to thrips. Somewhat late in maturity, it is generally grown from greenhouse plants and is successful almost anywhere in the East. Large and handsome, the onions often weigh over a pound and the flesh is white, sweet and fairly mild. They have a uniformly deep globe shape with small necks and heavy golden brown skin. Ours is the "jumbo" strain, selected for extra size, uniformity and quality. Highly recommended for transplant crops. See prices of seed at left and of plants on preceding page.

PEAS

Sow about 100-150 lbs. per acre in rows for market crops.

PEA CROPS IN 1961. We regret that our supplies of seed peas are very short this year and some popular varieties are not available. An early frost in Idaho followed by unseasonably hot weather caused serious reduction in yields. Fortunately, however, we have good supplies of the best market pea, Greater Progress, and should be able to handle your requirements with this fine variety.

GREATER PROGRESS
Big, attractive pods ready early.

160 Greater Progress

The Best Kind to Grow for Market (62 days)

If you grow peas for market, plant our Greater Progress, a remarkable large-podded early strain that has become tremendously popular in all sections. The husky vines are extra dwarf, not over 18 in. tall, and they are literally loaded with large well-filled deep green pods, borne out where they are easy to pick. They mature very early and come on evenly over a short period.

The pods are uniformly long, pointed and nearly straight, giving a most handsome appearance. Dark green in color, they are well-filled with big tender peas of good flavor. Now recognized as the best-looking, best yielding and most profitable pea for early or main crop production, and widely grown for roadside stands, market and shipping. We have the greatest confidence that you will like Greater Progress. See prices at left.

CONNECTICUT FIELD

PUMPKINS

An ounce of seed will plant 20 hills; about 3 lbs. to the acre.

698 Youngs' Beauty

Round and Bright—Excellent Type

Youngs' Beauty has quickly proved to be the pumpkin that growers were looking for. Developed by Arthur Youngs of Glen Head, L. I., it makes fine round fruit in the much wanted intermediate size, larger than Small Sugar but definitely smaller than Connecticut Field. The round shape is remarkably uniform and the hard skin has a rich, attractive orange color and is moderately ridged. Grow this along with Connecticut Field for a fine selection of sizes for Hallowe'en sales. See prices below.

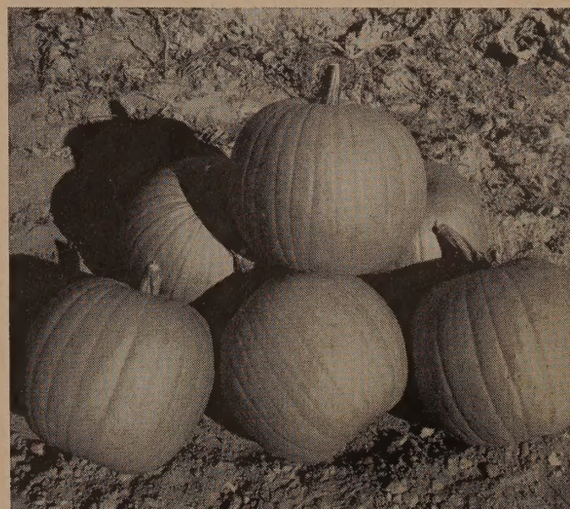
686 Connecticut Field

(Or "Big Tom"). Large, Handsome Fruit

We offer an excellent stock of this fine old variety, now so widely grown for Hallowe'en carving. The handsome fruit weigh up to 20 lbs., sometimes much more, and have a smooth hard ribbed surface of bright, attractive color. To get a good range of size, grow these along with Youngs' Beauty. See prices below.

	Oz.	¼ lb.	lb.	5 lbs. or more @
686 CONNECTICUT FIELD or Big Tom. *(115 days.)* *See above* 25 Lbs. or more @ $1.65	$ .25	$ .70	$1.90	$1.75
695 SMALL SUGAR or Pie Pumpkin. *(110 days.)* **Ideal Type.** Most popular for canning and pies. Fruit are small (6 - 8 lbs.) but produced in great numbers. Hard, smooth, deep orange skin; thick sweet dry flesh of excellent quality. Very profitable.	.25	.70	1.90	1.75
698 YOUNGS' BEAUTY. *(112 days.)* *See above* 25 Lbs. or more @ $1.95	.30	.75	2.25	2.10

YOUNGS' BEAUTY
Uniform, round pumpkin of the popular intermediate size.



OKRA or Gumbo

An ounce of seed will sow about 50 feet of row. 6-8 lbs. per acre.

	Oz.	¼ lb.	lb.	5 lbs. or more @
596 DWARF GREEN LONG POD. *(55 days.)* Large, deep green pods, somewhat ribbed and borne abundantly on dwarf plants. Popular type for shorter season areas.	$ .20	$ .50	$1.25	$1.10
597 EMERALD. *(58 days.)* A vigorous, heavy yielding type, preferred by many particular growers. Pods of good size, dark green, smoothly rounded instead of ribbed. Developed by Campbell Soup Co.	.20	.50	1.25	1.10

PENNWONDER—*The ideal pepper for plant sales.*

PEPPERS

An ounce of seed will produce about 1500-2000 plants. Figure ¼ to ½ lb. per acre.

675 Pennwonder

The Most Dependable Early Pepper

Plant growers for retail sales should offer and recommend Pennwonder. It is so much more dependable and productive than California Wonder and other later peppers that customers will be delighted. For market, too, it is by far the best early pepper.

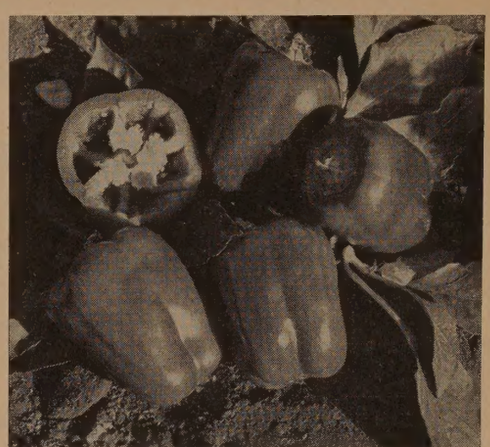
The sturdy, uniform plants set freely even when others have few fruit. The medium-sized peppers are usually tapered on the earliest set but are blockier thereafter. (See photo.) The color is excellent, dark green to rich red, and the thick meat is sweet and mild. Fully adequate in size for home use or local market, Pennwonder outyields all others under our conditions. Prices below.

656 Calwonder

Large, Main Crop Type for Shorter Seasons

Still a popular pepper for plant sales and market where earliness is more important than the disease resistance of Yolo and Keystone, Calwonder has compact plants that usually set well in Northern areas, ripening later than Pennwonder but with larger fruit. Not as fully 4-lobed as California Wonder nor as dependable a producer as Allbig, this variety makes big, blocky, thick meated peppers ripening from deep green to bright red. See prices below.

KEYSTONE ➡
RESISTANT GIANT



679 Vinedale

Extra-Early and Productive

For very short season areas or extra early crops, Vinedale is the one to grow. The dwarf vigorous vines produce quantities of brilliant red fruit right from the start of the season. The peppers are medium sized, somewhat tapered or pointed with fairly thick flesh of good quality. For red peppers where seasons are short, grow Vinedale. See prices below.

672 Hungarian Wax

Early, Very Hot

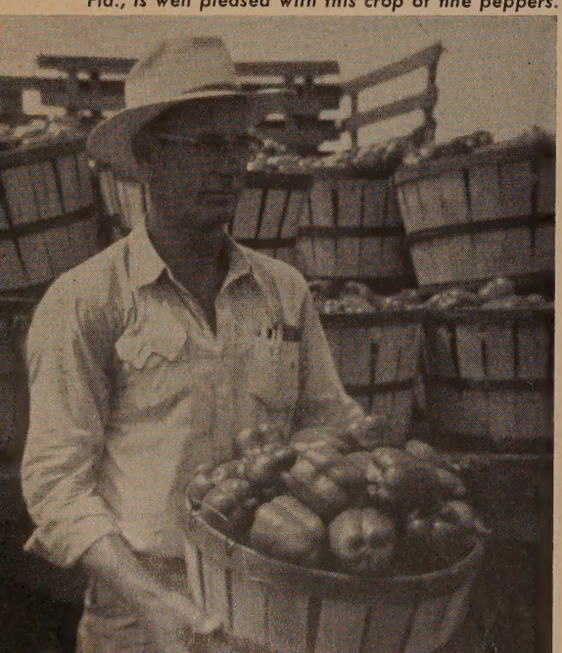
Our excellent re-selected stock is widely grown for market and canning. Vigorous and prolific, it ripens early to waxy yellow, turning bright red when fully ripe. Fruit are 5-6 in. long and 1½ in. in dia. at shoulders, smooth, tapered and pointed. Very hot. See prices below.

684 Yolo Wonder B

An Excellent Strain—Mosaic Resistant

Originally developed by the Campbell Soup Co. and now improved in performance and fruit type, Yolo Wonder B is highly recommended for market and shipping. It is resistant to tobacco mosaic, yields well in fairly long seasons and has proved widely adapted and a reliable producer. The fruit are of blocky California Wonder type, 3 or 4 lobed, thick meated, dark green and of good size. Plants vigorous, uniform and compact with heavy foliage. See prices at right.

YOLO WONDER B — *Herbert Behrens of Sanford, Fla., is well pleased with this crop of fine peppers.*



667 Keystone Resistant Giant

Big Blocky Fruit—Tobacco Mosaic Resistant

In many of the better pepper growing areas of the East and Midwest, especially where tobacco mosiac is serious, market growers and shippers prefer this resistant type. The plants grow 28 in. tall, upright with good foliage and are unusually vigorous and productive. The big, heavy peppers are 4 to 4½ in. long, 3¾ in. across, mostly 4-lobed, very thick meated and an attractive glossy dark green in color. Dependable under a wide range of conditions, this is a heavy yielder, maturing with Yolo Wonder. An outstanding strain. See prices below.

		Oz.	¼ lb.	lb.	5 lbs. or more @
650	**ALLBIG (Illinois F-5). (70 days.) Large, Dependable Pepper....** Big, thick-fleshed peppers mature earlier than Calwonder with this vigorous variety. Fruit are large, long, somewhat roughened. Sturdy vines stand up and produce over a long season.	$1.10	$3.35	$10.50	$10.00
652	**CALIFORNIA WONDER. (76 days.) Favorite Main Crop Type...** Although now being replaced by Keystone and Yolo, this old standard pepper is still used for market in longer season areas. We offer a fine uniform stock with smooth, well-shaped fruit of excellent color, green or red.	.95	2.85	8.50	8.25

RADISH

Sow 10 to 15 lbs. per acre, depending on the width of the rows.

EARLY SCARLET GLOBE, SHORT TOP—*Excellent for bunching or packaging.*

716 Early Scarlet Globe, Short Top

Excellent for Muck and Upland

For years this special short-topped strain of Early Scarlet Globe has been a favorite of market growers throughout the East and Middle West. Well adapted to both muck and upland growing, its roots are round to oval in shape, of bright scarlet color and are especially attractive for bunching and packaging. The short tops are right for summer crops, even on muck, and the firm crisp flesh is crystal white and of high quality. This excellent strain is one of the most popular radishes grown, and we recommend it highly. See prices below.

RED BOY—*Short tops, round, bright roots.*

730 Red Boy

Short-Topped Early Scarlet Globe Type

On muck, or on upland in summer, wherever extra short tops are desired, grow Red Boy. Round to slightly oval in shape with small crowns and slender tap roots, this is a refined strain of Short Top Scarlet Globe type. The tops will not get tall even on high nitrogen soils, and the smooth roots are uniformly excellent.

Red Boy has a sparkling bright red color, just right for poly bags. If sold by the bunch, the trim tops and smooth, even shape make a most attractive pack. See prices below.

725 Icicle—Short Top Strain

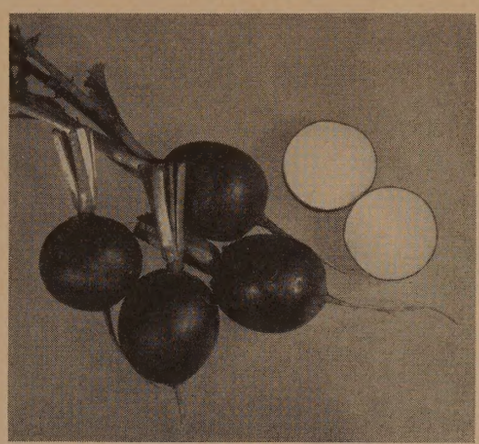
By Far the Best White Radish

This is an ideal stock of Icicle radish both for forcing and outdoor growing on muck and upland. It is so much superior to the tall-topped strains that there is no comparison. Very quick-growing, the roots are formed early and their smooth thick shape, uniformity and clear white color are outstanding. The tops do not grow too long indoors but are just right for bunching outside. See prices below.

731 Red Prince

Fusarium-Resistant Scarlet Globe Type

Wherever fusarium wilt is troublesome, as on old muck, try this resistant Scarlet Globe type from Dr. Pound of Wisconsin. Its attractive roots are oval-round with a slight taper to the bottom. Color is a good red although not as bright or uniform as Red Boy. Tops are short and tap roots very fine. This should be tried for summer crops in Ohio, Wisconsin and other areas where radishes have been grown for some time. See prices below.



CHAMPION
For extra-early or late crops.

708 Champion

Large Growing—For Cool Weather Crops

For extra early or late plantings, Champion fills the bill. A vigorous, larger topped radish, it makes good size and high quality, even when growth is slow, and reaches silver dollar size without becoming pithy. Roots are uniformly round with excellent color and slim tap roots. Not recommended for hot weather because of its tall tops and susceptibility to fusarium, but for very cool weather, growers find it excellent. See prices below.

706 Cherry Belle

Extra Short Tops—Round and Firm

An excellent variety for bunching or packaging, Cherry Belle is widely grown for greenhouse and frame forcing, muck crops and general outdoor use on irrigated land. It is an exceptionally short-topped radish which grows quickly but holds its firmness well. Round as a marble, the brightly colored roots have uniform shape and crisp mild flesh. The tap roots are very fine. See prices below.

705 Cavalier

Adapted for Muck or Greenhouse Forcing

Our years of careful selection have resulted in a beautiful stock of Cavalier. Ideal for forcing and muck growing, it has uniformly short tops, brilliant scarlet color and the roots stay firm for a long time without getting pithy. They are of the true olive shape and remarkably uniform—it is often possible to pull nearly 100% No. 1 radishes. Cavalier does well under glass, even on short winter days, and is excellent for muck in summer. Growers everywhere give our strain their highest praise. See prices below.

SWISS CHARD

¼ lb. of seed will sow about 250 feet of row.

830 Fordhook Giant

Best for Market

60 days. This is by far the most popular variety of Swiss Chard. It has larger and thicker leaves than other kinds and they are heavily crumpled and very dark green. The stem and midrib are broad, thick and white, and the plants are vigorous and sturdy. This is a very uniform strain.

¼ Lb. 55c; Lb. $1.50; 5 Lbs. or more @ $1.25.

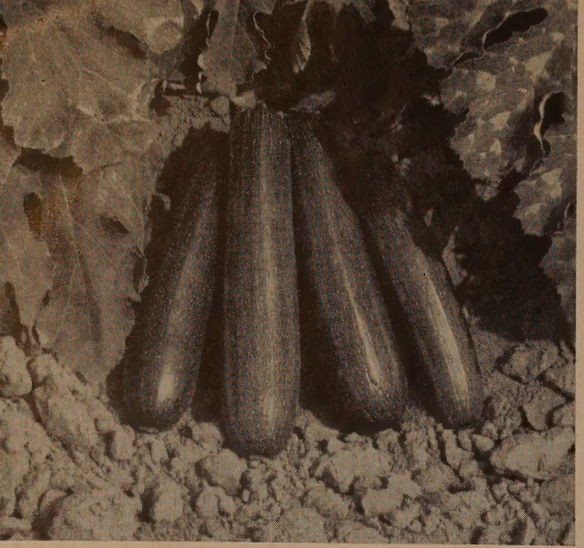
SALSIFY (Vegetable Oyster)

¼ lb. of seed will sow about 400 feet of row.

740 MAMMOTH SANDWICH ISLAND

The largest and best variety. Long, tapering fleshy roots with but few side shoots.

Oz. 65c; ¼ Lb. $1.80; Lb. $5.50; 5 Lbs. or more @ $5.25.



SUMMER SQUASH

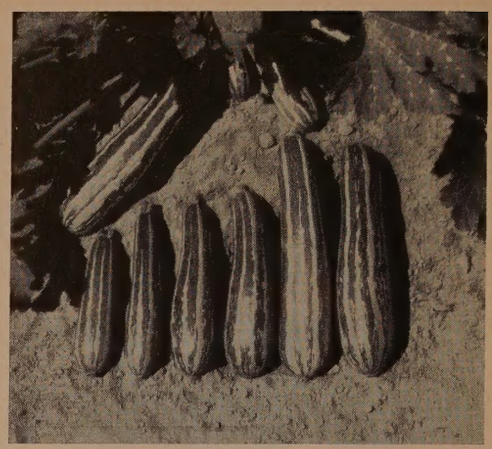
Sow about 3 to 4 lbs. of seed per acre.

794 Harris' Hybrid Cocozelle

Big Crops of Striped Fruit

Earlier, more vigorous and a better yielder, this is the best long Cocozelle yet. Produced exclusively by us, it is a true hybrid of the kind that markets want. Compact bushy vines start to bear extremely early and if kept picked continue at an astounding rate all season. Handsome fruit, medium long with dark and light green stripes. Real hybrid vigor and uniformity, profitable to grow. See prices below.

← ZUCCHINI HYBRID—*Fine quality, excellent type.*



HARRIS' HYBRID COCOZELLE

829 Zucchini Hybrid—*Enormous Yields, Ready Very Early*

Every year more growers learn the advantages of this vigorous F_1 hybrid, the earliest of summer squash. It is a delicious, productive type with tremendous yielding ability and the striking appearance combined with high quality brings a steadily increasing market.

Zucchini Hybrid has slightly tapering fruit of beautiful glossy dark green color, finely flecked with lighter green. The compact bush vines are easy to pick and they bear heavy crops right from the start. See prices below.

817 Seneca Prolific Hybrid

True Hybrid, Uniform and Productive

This F_1 hybrid is the earliest and most productive yellow summer squash with us. The fruit resemble Early Prolific Straightneck but are smooth skinned with a creamy yellow color, free of mottling and greenish streaks. If kept picked, the vines will produce great numbers of excellent, uniform fruit throughout the season. We recommend this vigorous hybrid as best to grow where yellow squash for market are desired. See prices at left.

SPINACH

Sow 10 to 15 lbs. of seed per acre.

750 Blight Resistant Savoy

Dependable for Fall Crops

In late summer and fall when other varieties blight, this popular kind is the standard type to sow. The leaves are dark green and well crumpled and the yields are good. Our strain is exceptionally uniform and preferred by critical growers. Not recommended for spring. See prices at right.

751 Badger Savoy *(New)*

Blight and Blue Mold Resistant

Developed by Dr. Glenn Pound of Wisconsin, this outstanding spinach combines disease resistance with excellent type. Fairly long standing, it is successful in both spring and fall plantings, and the leaves are well savoyed with dark green color and good texture. It is resistant to both blight and blue mold (mildew), and its upright habit adapts it to mechanical harvesting. Stands several days longer than Blight Resistant. Not winter-hardy. See prices at right.

765 Savoy Supreme *(New)*

Upright Growth, Stands Well in Summer

Another fine spinach from Dr. Pound, Savoy Supreme merits further trial as a late spring or summer spinach. Although it showed some bolting from early sowings in 1961, it has been excellent in trials for several years under warm weather conditions. It is quicker growing and more upright than America, and usually stands almost as long. The uniform attractive plants are of fine type with heavily-savoyed, glossy dark leaves. Resistant to blue mold, not to blight. See prices at right.

752 Dark Green Bloomsdale

Extra Dark Green Strain

A special stock with large heavily crumpled leaves that stands fairly well without bolting in spring. Early and practically 100% uniform, the plants are erect in growth with deeply savoyed leaves of outstanding rich deep green color and heavy texture. Widely grown for spring planting and for wintering over. See prices below.

	lb.	5 lbs. or more @	25 lbs. or more @	100 lbs. or more @
749 AMERICA. (47 days.) Long-Standing Type. Extra-long-standing, thick textured leaves of fine savoy type. Slower growing than Savoy Supreme, less upright in growth. Has been very popular for summer crops.	$ .70	$ .60	$ .43	$ .41
751 BADGER SAVOY. *(New.)* (41 days.) See at left.	.80	.70	.53	.51

754 DIXIE MARKET. (39 days.) For Fall Crops. Quick growing, dark green, heavy yielding savoy, resistant to blue mold and blight. Upright plants for mechanical harvesting. Bolts easily but used for fall sowing in North and winter crops farther south.	.70	.60	.43	.41
758 NEW ZEALAND SPINACH. (70 days.). ¼ Lb. 35c; Not a true spinach, but grows a large plant with small thick leaves, may be cut repeatedly for greens in hot weather. Seed should be soaked 24 hours before planting.	1.00	.95	.85	....
764 SAVOY HYBRID 612. *(New.)* (41 days.) Processing Type. High-yielding, upright plants, large semi-savoyed leaves. Blight and blue mold resistant. More savoyed and darker green than Hybrid 7 or 8. Bolts very early so suggested for fall use only.	1.50	1.35	1.25	....
765 SAVOY SUPREME. *(New.)* (45 days.) See at left.	.80	.70	.53	.51
768 VIKING. (46 days.) Large-Leaved—Long Standing. Early, large leaved, grows rapidly, yet stands for a long time. It has big, broad, flattened, dark green leaves and produces immense crops. Used by canners.	.70	.60	.43	.41
767 WISCONSIN BLOOMSDALE. (43 days.) Mildew Resistant. A Dark Green Bloomsdale type for spring planting, blue mold (mildew) resistant. Very vigorous, grows quickly yet stands well. Uniform plants, well-savoyed leaves of medium texture.	.80	.70	.53	.51

WINTER SQUASH

Sow Butternut and Acorn types at 2 to 4 lbs. per acre. Larger varieties 1½ to 3 lbs.

774 Butternut

By Far Our Most Popular Small Squash

The most widely grown small squash in the East, Butternut has become the leading variety in other sections as well. Dependable and productive, its distinctive shape is now recognized by customers as a guide to the finest quality.

The fruit are of moderately long, blocky shape with straight thick necks that are completely filled with sweet, fine-textured, dry flesh. Three or four pounds in weight, they are regarded as the ideal size for modern markets. Butternut matures early, bears big crops for summer and fall sale and also keeps well enough in storage for early winter use. Resistant to squash vine borers and highly prolific on nearly all soils, this is the squash to grow. See prices below.

BUTTERNUT—*A superior strain of the most popular small squash.*

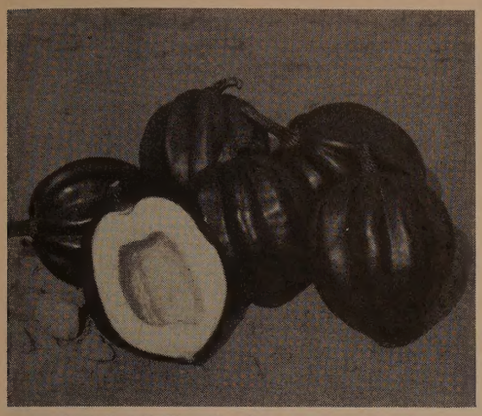

TABLE QUEEN—The Ebony Acorn Strain
Ideal size and type for most markets.

820 Table Queen

Ebony Acorn—Improved Strain

This new selection has proved to be superior in color, uniformity and quality, and growers now consider it the finest Acorn squash. Its size is just right for modern markets, only slightly smaller than Royal Acorn, and the fruit are very uniform and attractive. They have a hard shell of deep black-green, not as deeply ridged as Royal Acorn, and the thick flesh is rich orange, fine textured and bakes dry and sweet. We believe you will call this strain the finest you have ever grown. See prices below.

770 Blue Hubbard—*Harris' Famous Selected Strain*

Our special large, rugged strain produces immense yields of big, well-shaped squash that bring the highest prices. The thick-fleshed fruit is uniformly heavy and stores well.

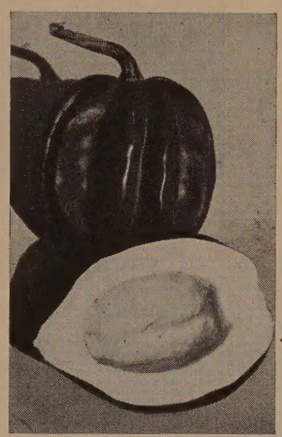
Our strain is the result of years of careful breeding here on our own farms, and is recognized as the finest, purest stock grown. It cannot be obtained elsewhere.

Blue Hubbard is still in good demand on most markets in the East, and the fine quality, enormous yields and excellent keeping quality of our famous strain make it one of the most profitable squash to grow. For many years, it has been the favorite of important growers. See prices below.

815 Royal Acorn

Popular Market Type

For many years, this larger strain of "individual" or Acorn squash has been the leader for market. It is a vigorous grower with large crops of dark green fruit, up to 6-7 in. long and 5 in. across. Ours is a fine uniform stock of our own growing. See prices below.



← ROYAL ACORN
Uniform, productive.

HARRIS' BLUE HUBBARD
The finest strain available.

773 Buttercup

New Burgess Strain—Best of Its Kind

This excellent strain, developed and supplied to us by our friend Bill Burgess of Minot, Maine, is the finest Buttercup we have ever seen. It has a distinctive cylindrical shape, which gives extra meat at the shoulders, and its dark green color and greater uniformity of size and type show real improvement over the standard strains. The deep orange flesh is extra dry and sweet, the finest of all winter squash to eat in our opinion. For roadside stands and market, grow this new handsome, high quality Buttercup, the ideal "family size" squash. See prices at left.

BUTTERCUP
The best-tasting squash of all.

TOMATOES

An ounce of seed will produce 3000 to 4000 plants.

MORETON HYBRID—*Famous for heavy yields of highest quality fruit.*

871 Moreton Hybrid

Uniformly Large Fruit—Wonderful Quality—Widely Adapted

This true F_1 hybrid of our own breeding is still the finest early tomato ever developed in our opinion. It combines hybrid vigor, earliness, size, fine appearance and wonderful quality, and it usually excels all standard varieties until the late season.

Both for staking and ground culture, Moreton is a heavy yielder of uniformly good-sized to large fruit, firm and handsome, ready to pick as early as Valiant and bearing over a long season. They are preferred on the market because of their high quality, with solid meaty interiors and a rich sweet flavor. Globe or slightly flattened in shape, they usually weigh 6 to 7 oz. and color evenly to a rich red throughout.

Moreton is a vigorous hybrid that responds to the best cultural conditions you can get. The vines are husky and spreading with good foliage cover. On stakes, train to two leads and do not prune severely to reduce cracking. One of our most successful introductions, Moreton is widely adapted and is the leading tomato in many areas. We highly recommend it. See prices on next page.

FIREBALL—*The best extra-early — a Harris introduction.*

861 Fireball

Another Great Harris' Introduction—for Early Crops

Developed originally as an extra-early market tomato for the North, Fireball is now the leading canning tomato in New York and increasing in interest in other areas. The secret is in learning how to grow it properly, mainly in using young plants and a high population per acre, or from direct seeding. (Further information is available from Dr. Phil Minges at Cornell, who has helped develop improved cultural practices for Fireball.)

The compact, determinate vines will produce good foliage under the right conditions and may be spaced 1 to 2 ft. apart in rows 3 to 5 ft. apart. The blossoms set freely even at cool temperatures and the medium-sized fruit ripen quickly from pale green to bright red. They are attractive, smooth and round in shape, relatively free of cracks and scars and the inside color is a good rich red, fine for table use or processing. Remarkably firm for an early tomato, holds well on the vine.

For the first tomatoes on the market or for heavy tonnage early in the season at the cannery, grow the true originator's strain, Harris' Fireball. See prices on next page.

862 Glamour

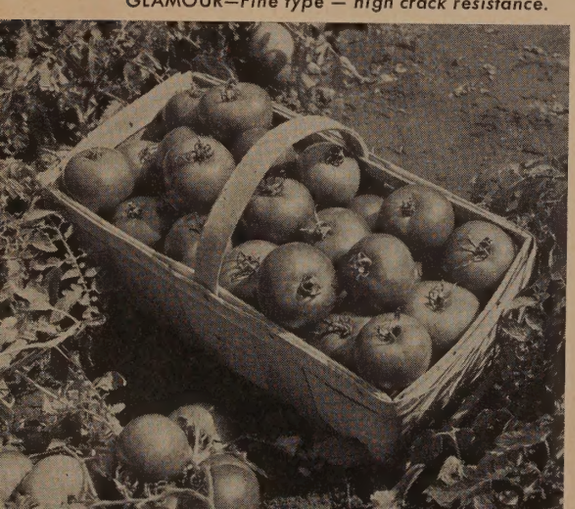
Real Crack-Resistance—Main Crop Type

Now the most popular midseason variety we offer, both for market and processing. It is not only crack resistant but has large firm fruit of fine type and color. Glamour sets freely and produces heavy crops, especially on deep soils with good moisture.

The fruit are flattened globe in shape, smooth, clean-shouldered and attractive. The firm meaty flesh is quite mild in flavor and colors well from the inside. Pale green when immature, they ripen evenly to a bright red and hold up well in handling.

For main crop market and for canning, we recommend Glamour as a most productive dependable, crack-resistant tomato. Developed by W. D. Enzie of Birdseye and released to us by Hunt Foods. *Hot Water Treated Seed.* See prices on next page.

GLAMOUR—*Fine type — high crack resistance.*



CARDINAL HYBRID—*Increasingly popular.*

884 Roma—*Wilt-Resistant Paste Tomato*

Both for fresh market and processing, this fusarium wilt resistant paste tomato is the one to grow in the East. The vigorous compact vines set abundant crops of firm plum or pear shaped fruit, about 2½-3½ in. long by 1½ in. thick, solid and bright red throughout. Roma can be mechanically harvested and is an excellent strain of this type. **N. Y. Certified Seed.** See prices on next page.

886 Roma, V. F. *(New)*—*For Trial*

A new strain with tolerance to verticillium wilt added to the fine features of Roma. About the same season, yield and type, the vines hold up better. A new Harris development for testing in 1962. Prices on next page.

853 Cardinal Hybrid

Harris' Crack-Resistant Midseason Hybrid

Growers in many sections have found our Cardinal Hybrid an outstanding main crop tomato. It has good crack-resistance and the fruit are large, firm and smooth, slightly flattened in shape and of excellent quality. It makes a fine companion to Moreton for plant sales and for market growers.

This true F_1 hybrid is a midseason type with vigorous but not rank-growing vines and affords more foliage protection than Glamour. It is a better yielder, slightly larger and we prefer it to eat—the flavor is delightful. Rich red interiors and solid structure combine with handsome appearance and high quality to make a wonderful big tomato for stands and local markets. Prices on next page.

885 Rutgers

An Old Favorite—Fine for Green Wraps

Rutgers has been for many years a standard main crop tomato and is still well-liked for plant sales and for late market. Its smoothness, fine appearance and excellent coloring from the immature stage make it first choice for green wraps.

The vines are large and husky and the fruit are big and solid, rich red throughout and of high quality. Our strain has been selected for market type, with uniform size, smoothness and even shape, and our northern-grown seed is preferred by critical growers. **N. Y. State Certified Seed.** See prices on next page.

889	**VALIANT. (70 days.) Popular Early Tomato.** Large, meaty fruit of deep globe shape and good quality, ripening early on open, spreading vines. Now mostly replaced by Moreton Hybrid both for plant sales and early market crops.	.95	3.10	9.50 9.00

875 Michigan-Ohio Hybrid

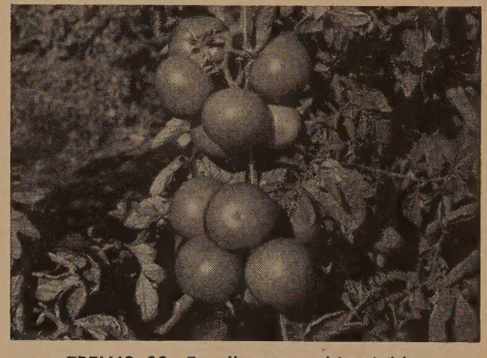
Large-Fruited, Productive Greenhouse Type

An excellent hybrid for greenhouse growers in the Mid-West and Canada where a large red tomato is desired. The plants are vigorous and productive even in dark weather. Fruit near globe-shape, uniform, well-colored and of high quality and fair firmness. Resistant to fusarium wilt but not to leaf mold. *(Michigan State Forcing x Ohio WR 7.)* See prices above.

888 Tuckcross O

Large Greenhouse Hybrid for Mid-West

(Tucker's Forcing x Ohio WR 3.) Developed by Dr. V. M. Lambeth of Missouri Exp. Sta., this is a fine large red hybrid for greenhouse growers, resistant to leaf mold and fusarium wilt. Large vigorous vines, fruit big and solid, nearly globe-shaped and seems to set well under adverse conditions. A good producer and bears from early to late. Recommended under glass or plastic. See prices above.



TRELLIS 22—*Excellent type, big yields.*

893 Trellis 22

Firm and Uniform

The standard New England outdoor trellis tomato, developed by Dr. Young at Waltham, Mass. Exceptional uniformity, medium size and smooth flattened shape. Fruit very firm, thick-walled, handle well. **N. Y. Certified.** See prices at left.

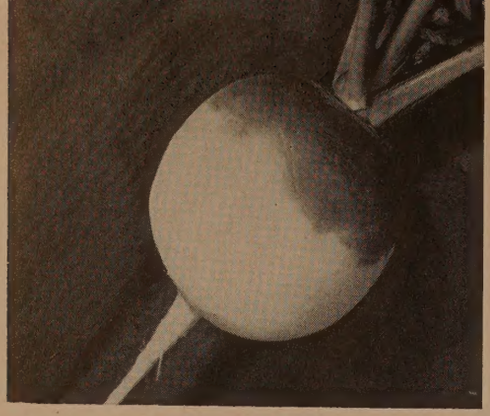
SMALL FRUITED TOMATOES
Popular for pickles, salads, etc.

878 Red Cherry, Large—
Half-dollar size, mild and sweet, now widely grown for shipping in pint boxes.

879 Red Cherry, Small—
The original small, tart-flavored cocktail tomato.

881 Red Pear, 894 Yellow Pear,
895 Yellow Plum, 863 Ground Cherry.

Pkt. 20c; ½ Oz. 65c; Oz. $1.25; ¼ Lb. $4.00.
Any three Pkts. 50c; any three ½ Oz. $1.50.



920 Purple Top White Globe ↑

Special Strain—Very Uniform

Our Purple Top White Globe is highly regarded by critical growers. The roots are smooth and handsome, uniformly globe-shaped with undersides of snowy white, changing at a sharply defined line to bright purple color. The attractive appearance of these roots makes them ready sellers on the market. See prices at right.

TURNIPS

1 to 1½ lbs. of seed per acre in drills, or 2 to 2½ lbs. broadcast.

911 Just Right

F_1 Hybrid—Early and Uniform

Just Right is a true F_1 hybrid, developed by Japanese plant breeders. It is unusually vigorous and a big producer of heavy, quick-growing tops with light green, glossy, deeply cut leaves. The large smooth roots are snow white and uniform, with distinctive flattened shape, and the white flesh is tender and mild. Just Right is used in some areas as a dual purpose turnip, for both tops and roots. See prices below.

	¼ lb.	lb.	5 lbs. or more @	25 lbs. or more @

RUTABAGAS

901 ALTA SWEET. Fine Flavor. Best Market Type. (90 days.) This is a refined strain of Purple Top Yellow Globe rutabaga, smooth in shape, well colored and of outstanding quality. The fine-grained flesh is milder and sweeter than the standard kinds. Highly recommended.	.45	1.25	1.15	1.00

ASPARAGUS ROOTS, STRAWBERRIES and RASPBERRIES

TERMS: Strictly net cash with order on all plants. No C.O.D.'s.

Shipping Area: New England, New York, New Jersey, Penna., Ohio and Michigan only.

Method of Shipment: Where quoted "Not prepaid," we send by express collect, or by mail at purchaser's expense.

Express: Be sure to give nearest express office.

Mail: Include extra postage charge with your remittance. From weights listed below, you can determine rate at your local post office. If over 300 miles from Rochester, we strongly recommend that you send 50¢ extra for Special Handling.

We are not responsible for plants living after they are planted. If plants do not arrive in good condition, *notify us at once* and proper adjustment will be made.

SPARKLE—*Highest quality commercial berry.*

ASPARAGUS ROOTS

We offer extra large, vigorous 1-year roots, for shipment in April or early May.

Waltham Washington – A uniform high-yielding strain of the regular Washington asparagus.

1-year roots—100 $5.00 postpaid.
Not prepaid, 500 $14.00; 1000 $25.00.

Tetra—A new double-chromosome strain, said to produce thicker stalks. For trial.

1-year roots—100 $5.50 postpaid. Not prepaid, 500 $15.00; 1000 $27.50.

Shipping weights:
500 about 65 lbs., 1000 about 125 lbs.

STRAWBERRIES

We specialize in hardy, vigorous Northern-grown plants, grown from virus-indexed stock. Early orders are shipped from dormant stock held in cold storage. Later orders may be filled with fresh-dug plants if our dormant stock is exhausted. Available in April and first week of May only.

Shipping weights: 500—about 35 lbs.
1000—about 65 lbs.

Recommended varieties: **Empire** is the most popular with large fruit of good appearance. **Sparkle** is a high quality berry adapted for freezing, resistant to red stele. **Catskill** is a heavy-yielder with big fruit.

EMPIRE ➔
Large, glossy berries ready early.

	100 Prepaid	500 Not Paid	1000 Not Paid
CATSKILL. Big Yielder, Late-Midseason. Abundant crops of very large, bright red fruit. Large, husky plants, hardy and vigorous growth, midseason to late maturity, long bearing period. Propagated from virus-indexed stock.	$3.95	$12.50	$19.95
EMPIRE. Large, Vigorous, Handsome. Ripens early and produces tremendous crops of large, glossy conical berries of striking appearance and excellent sweetness and flavor. Size holds up all season. Widely grown for roadside stands and local market. Plants vigorous with plenty of runners, good yielders.	3.95	12.50	19.95
FAIRFAX. High Quality Garden Type. An excellent berry to eat, distinguished by its deep red color which turns quite dark after picking. To those who know Fairfax, the dark color is a trademark of its exceptional sweetness and flavor but it is not popular for commercial use. For best results it needs good care on rich land.	3.95	12.50	19.95
PREMIER. Early, Standard Berry. Also called Howard 17, this berry has only fair quality but is widely grown because of its earliness and dependable production under a wide range of conditions. The blossoms are not apt to be hurt by frost and the fruit are medium to large.	3.95	12.50	19.95
SPARKLE. Midseason, Attractive. Brilliant color, firm, attractive, medium-sized fruit. Remarkably large crops ripen in midseason on vigorous, hardy plants. Choicest quality, excellent for freezing. Resistant to Red Stele and widely adapted in the North.	3.95	12.50	19.95

W3756 MAYTIME. *All-America Winner.* A lovely light salmon-pink, 100% grandiflora. The 3½″ to 4″ lightly fringed flowers have wide, white throats touched with yellow. The plants are very uniform, compact, spreading and base branching. This has a special appeal to those gardeners who want soft color. Early and free flowering. 12 in.

W3758 KANDY KANE. *A Harris Original.* Transplants sell themselves when customers see this vigorous early hybrid already blooming in Market-Paks at our garden stores. The big, fringed 3″ flowers on short, stocky plants make a combination with a lot of sales appeal. The wide range of variations of salmon and white is most attractive, and the plants make a bushy upright growth even under adverse conditions. Don't miss this one. 12 in.

Harris' F1 Hybrid Grandiflora and Double Petu

W3757 SALMON PERFECTION. *A Harris Original.* You cannot find a better salmon-pink petunia than Harris' Salmon Perfection. In color and type it resembles the long-popular Ballerina but is far more dependable and free flowering. The 10-inch plants maintain their low, compact habit throughout the season and produce glowing, 3½-inch flowers in great numbers. There is no finer grandiflora petunia available.

W3764 ALBATROSS. *A New Harris Original.* Where our customers require somewhat smaller and darker green plants than Seafoam, this new Harris introduction fills the bill. Huge ruffled flowers of glistening white are 4½ in. across, with petals somewhat more reflexed than Seafoam's. Plants are branching and grow only a foot high. Albatross does not replace the tremendously popular Seafoam, but for growers who want slower-growing plants, we recommend it highly. 12 in.

Albatross ↓

W3754 RED ENSIGN. A grandiflora orange-scarlet with gracefully waved, 3″ flowers borne in abundance on low, spreading, one-foot plants. The color compares with Comanche and Red Satin, and the flowers are notably resistant to rain and moisture. The large red flowers, produced early in flats, make this one of the fastest selling varieties. We rate it the best in the red grandiflora class. 12 in.

500 seeds 90c; 1000 seeds $1.65; 1/128 Oz. $3.00; 1/64 Oz. $5.50; 1/32 Oz. $10.00; 1/16 Oz. $18.00; 1/8 Oz. $33.00; 1/4 Oz. $60.00.

Red Ensign →

W3742 SABRE DANCE. Tremendous 4-inch ruffled flowers of dark crimson-red with a large white star that holds its pattern well throughout the season. The plants are quite compact and grow with remarkable vigor. 15 in.

500 seeds $1.10; 1000 seeds $2.00; 1/128 Oz. $3.85; 1/64 Oz. $7.50; 1/32 Oz. $13.50; 1/16 Oz. $25.00; 1/8 Oz. $47.00; 1/4 Oz. $90.00.

↓ Sabre Dance

W3740 BLUE LACE. This unusual grandiflora with its intricate pattern of veins and its delicate fringe has a truly "lacy" appearance. The soft slate-blue shade combines beautifully with other colors and makes an especially fine effect with pink, salmon and yellow. The dwarf compact plants are vigorous growers and produce their 3½″ flowers in great profusion. This combination of soft color and striking appearance appeals to many gardeners. 12 in.

500 seeds $1.10; 1000 seeds $2.00; 1/128 Oz. $3.85; 1/64 Oz. $7.50; 1/32 Oz. $13.50; 1/16 Oz. $25.00; 1/8 Oz. $47.00; 1/4 Oz. $90.00.

W3771 HARRIS' WHITE SAILS. *A Harris Original.* The 3½″, beautifully formed, lightly fringed flowers are pure white, without the "blushing" found in some white petunias, and are highlighted with yellow throats. The foliage is dark green and plants have tremendous appeal in flats. Bloom is early and plants remain upright and compact for weeks. 12 in.

500 seeds $1.10; 1000 seeds $2.00; 1/128 Oz. $3.85; 1/64 Oz. $7.50; 1/32 Oz. $13.50; 1/16 Oz. $25.00; 1/8 Oz. $47.00; 1/4 Oz. $90.00.

W3743 BLUE MANTLE. Rich velvety violet-blue. 3″ blooms are waved and lightly fringed. Early flowering. Dwarf compact, uniform, vigorous growth. The deepest purple in the grandiflora petunias. 12 in.

500 seeds 90c; 1000 seeds $1.65; 1/128 Oz. $3.00; 1/64 Oz. $5.50; 1/32 Oz. $10.00; 1/16 Oz. $18.00; 1/8 Oz. $33.00; 1/4 Oz. $60.00.

W3763 PRIMA DONNA IMPROVED. This new development in one of the most popular grandifloras is almost like a wonderful new variety. It has the same huge, fringed flowers of deep glowing rose, but it blooms earlier and the vigorous plants are more dwarf and compact. A real advance. 10 in.

500 seeds $1.10; 1000 seeds $2.00; 1/128 Oz. $3.85; 1/64 Oz. $7.50; 1/32 Oz. $13.50; 1/16 Oz. $25.00; 1/8 Oz. $47.00; 1/4 Oz. $90.00.

STOCKS *18,000 seeds to the ounce.*

W6030 PARK, TEN WEEKS, MIXED COLORS. The same type as the regular Ten Weeks but can be grown 100% double *by transplanting only the light green seedlings* and discarding the dark ones which produce single flowers.

The light green color is more pronounced when seedlings are grown at a 50° temperature. Our mixture contains white, lavender, purple, flesh pink, rose and blood-red. 15" to 18"

Lg. Pkt. 30c; ⅛ Oz. 45c; ¼ Oz. 75c; Oz. $2.50; ¼ Lb. $8.50.

W6020 TEN WEEKS, VARIETY MIXTURE. A popular bedding plant which can be started early and gives best results if grown cool. Colors include white, pink, rose, red, yellow, azure and purple. Flowers have a spicy fragrance. 15-18"

Lg. Pkt. 30c; ⅛ Oz. 45c; ¼ Oz. 75c; Oz. $2.50; ¼ Lb. $8.50.

W6035 TRYSOMIC SEVEN WEEKS, MIXED COLORS. These Stocks have been bred for their extreme earliness and ability to stand up under trying summer weather. Vigorously growing transplants produce stocky flower spikes about 6" high while still in flats. In the garden numerous side branches form, resulting in an attractive, bushy plant 15" high.

Lg. Pkt. $1.00; ⅛ Oz. $2.50; ¼ Oz. $4.50; Oz. $15.00.

SWEET PEAS

340 seeds to the ounce.

EARLY MULTIFLORA SWEET PEAS

W7800 MIXED COLORS. These early flowering sweet peas make an unusually vigorous plant growth with stiff flower stems 14" to 16" long and five or six fragrant flowers per stem. Our mixture contains all the sweet pea colors.

Oz. 75c; ¼ Lb. $2.50; Lb. $7.50.

SPENCER OR SUMMER FLOWERING

W7675 SPECIAL VARIETY MIXTURE. The standard or late flowering sweet peas for outdoor growing. Our mixture is recommended for cool areas where sweet peas do well. It contains all the existing colors. Oz. 40c; ¼ Lb. $1.25; Lb. $3.75.

SPRING FLOWERING (Cuthbertson)

W7110 MIXED COLORS. An intermediate or second-early strain for areas where sweet peas are readily grown. Blooms late into the spring as an indoor crop. Our mixture is made from the complete range of colors in this class.

Oz. 40c; ¼ Lb. $1.35; Lb. $4.50.

SWEET WILLIAM (Annual)

26,000 seeds.

W6146 WEE WILLIE. An extra dwarf strain which blooms in 6 to 7 weeks from seed and bears single flowers in a bright range of red shades. 3 in.

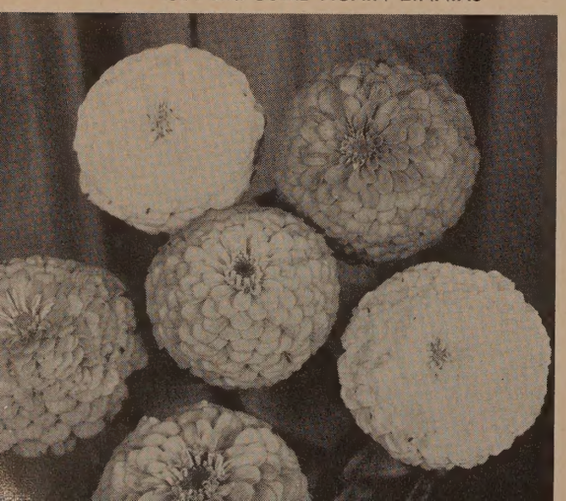
Lg. Pkt. 40c; ⅛ Oz. 80c; ¼ Oz. $1.50; Oz. $4.50.

TORENIA *(Wishbone Flower)*

W7955 FOURNIERI COMPACTA. *(375,000 seeds.)* We have an even, compact strain of this charming bedding and edging plant. The inch-long flowers have a deep lavender standard and rich purple lip with a bright yellow blotch. Excellent for shade. 10 in.

1/32 Oz. 40c; 1/16 Oz. 70c; ⅛ Oz. $1.25.

CUT-and-COME AGAIN ZINNIAS



SNOW-ON-THE-MOUNTAIN

W5192 EUPHORBIA VARIEGATA. *(2500 seeds.)* The green and white foliage of this old time favorite provides a perfect foil for bright flowers such as salvia. 2½' ¼ Oz. 45c; Oz. $1.25.

THUNBERGIA *(Clock Vine)*

W7940 ALATA. *(1,200 seeds.)* This little vine with orange, yellow and creamy-white flowers, some with black centers, has always been popular for urns and window boxes. 18" ¼ Oz. 60c; Oz. $1.75.

TITHONIA

W7920 TORCH. *(3000 seeds.)* Long-stemmed brilliant orange-scarlet single blooms are produced in late August. 3½' to 4'

Lg. Pkt. 40c; ⅛ Oz. 80c; ¼ Oz. $1.50; Oz. $4.50.

VINCA ROSEA *(Periwinkle)*

W8050 MIXED COLORS. *(21,000 seeds.)* A "foolproof" annual that thrives in sun or shade, wet or dry weather. Our mixture is made from separate colors—white, white with pink center, rose, and pink with darker center. 18"

Lg. Pkt. 25c; ¼ Oz. 45c; Oz. $1.75.

W8055 DWARF LITTLE BRIGHT EYE. Dwarfer and more compact than regular Vinca Rosea. This variety has dark green, glossy foliage with pure white flowers and a small red eye. 10 in.

Lg. Pkt. 60c; ⅛ Oz. $1.25; ¼ Oz. $2.25; Oz. $7.50.

W8056 DWARF LITTLE PINKIE *(Coquette)*. Same dwarf compact habit as Little Bright Eye with rosy pink flowers. 10" Lg. Pkt. 40c; ⅛ Oz. 75c; ¼ Oz. $1.25; Oz. $4.00.

ZINNIAS

FOXGLOVE *(Digitalis)*

W2725 EXCELSIOR STRAIN, MIXED COLORS. *(272,000 seeds.)* Here is a distinct break in this old fashioned flower. The florets are carried all around the stem, either horizontal or nearly erect, revealing the full effects of the markings and contrasting blotches of deeper color inside the tubes. Colors range from white, through cream, primrose, delicate pinks to deep rose and deep lavender. 5′-6′

Lg. Pkt. 35c; ⅛ Oz. 60c; ¼ Oz. $1.00; Oz. $3.00.

DELPHINIUM

(13,000 seeds.) The big ***PACIFIC GIANTS*** are a "must" for anyone growing perennial plants. Large vigorous plants; tall sturdy spikes; florets very large and double. Requires an alkaline soil; cool weather is essential for good germination. 5′

W2669 ASTOLAT. Bluish pink, rosy pink to raspberry-rose with dark bee. The only Delphinium in these shades available from seed.

Lg. Pkt. (400 seeds) $1.25; ⅛ Oz. $3.00; ¼ Oz. $5.00; Oz. $15.00.

W2642 GALAHAD. Pure white

W2662 GUINEVERE. Light pinkish lavender

W2663 LANCELOT. Clear soft lilac

W2664 BLUEBIRD. Bright, medium blue

W2667 SUMMER SKIES. Clear light blue

W2668 KING ARTHUR. Dark violet.

ANY ONE OF ABOVE 6 COLORS: Lg. Pkt. 85c; ⅛ Oz. $2.00; ¼ Oz. $3.50; Oz. $12.00.

W2665 PACIFIC GIANTS, MIXED COLORS. Contains all the colors in the Pacific Giants except Astolat. Lg. Pkt. 75c; ⅛ Oz. $1.85; ¼ Oz. $3.25; Oz. $11.00.

W2641 HARRIS' MONARCH STRAIN. Our own selection of outstanding material from the best strains on the market. Grown under northern conditions and requires no coddling. 5′

Lg. Pkt. 40c; ⅛ Oz. 75c; ¼ Oz. $1.25; Oz. $4.00.

W2645 BELLADONNA. The standard single light blue for florists. 4′

Lg. Pkt. 30c; ¼ Oz. 90c; Oz. $3.00.

GAILLARDIA *(Blanket Flower)*

W2910 DAZZLER. *(10,000 seeds.)* Easy to grow, adaptable to almost any garden conditions. Always popular so plants are easy to sell and as cut flowers they are in great demand. They bloom most of the summer if kept cut back. 2½′

Lg. Pkt. 20c; ¼ Oz. 50c; Oz. $1.75.

LUPINES

W3335 RUSSELL, HARRIS' SUPREME MIXTURE. *(1400 seeds.)* The long, closely set spikes of very large florets in the Russell Lupines are the ultimate in perennial breeding. Here's a perennial that would be profitable sold in bloom in tar paper pots. Pink, rose, buff, bronze, rust red and blue are in our mixture, as well as many bicolors. 3′

Lg. Pkt. 30c; ¼ Oz. 55c; Oz. $2.00; ¼ Lb. $6.50.

Russell Strain in separate colors —

W3331 WHITE SHADES

W3332 PINK SHADES

W3333 YELLOW SHADES

W3334 BRICK RED

W3336 CARMINE RED

W3337 BLUE WITH WHITE FLAG

Above colors: Lg. Pkt. 40c; ¼ Oz. 70c; Oz. $2.50; ¼ Lb. $7.50.

LUNARIA *(Honesty)*

W3178 BIENNIS. *(1500 seeds.)* Also called Silver Dollars. The seed pods are dried for arrangements. It takes two years to get flowers and seed pods unless seed is started indoors very early. 2′

¼ Oz. 35c; Oz. $1.25.

PRIMROSE

W4023 VERIS COLOSSEA, MIXED. *(33,000 seeds.)* This new primrose has larger flowers, 1½ to 2″, longer stems and a wider range of colors than is found in the older varieties. If plants are blooming at May planting time they bring very good prices. Seed may take from 4-6 weeks to germinate. 10″

Sold Out.

PYRETHRUM *(Painted Daisy)*

W4015 ROBINSON'S HYBRIDS. *(22,000 seeds.)* The best single strain developed thus far with very large daisy-like flowers and long stems. Red and pink shades. A profitable cut-flower for May and June. Plants sell well, too. 2½′

Lg. Pkt. 30c; ¼ Oz. $1.00; Oz. $3.00.

SHASTA DAISY

W4670 ALASKA. *(20,000 seeds.)* Large single flowers produced in abundance on long stiff stems. 3′

Lg. Pkt. 20c; ¼ Oz. 45c; Oz. $1.50.

W4672 DIENER'S DOUBLE. *(18,000 seeds.)* Although no large percentage of these may be double, new and interesting forms appear in a planting. 3′

Lg. Pkt. 40c; ⅛ Oz. $1.00; ¼ Oz. $1.75; Oz. $5.50.

NO. 57 MARKET-PAK

No. 57 MARKET-PAK *(New)*

8¼ x 6¾ at Top, 2½ in. deep.
The Ideal Size for Premium Plant Sales.

Here is the Market-Pak you have been waiting for—the same popular size and shape as the old No. 3 Gro-Tainer. For growers who want to market a better than average product, this size will produce sturdy, handsome, well-grown plants, uncrowded even in bloom, well worth a premium price.

For an extra-special package, use Jiffies in the No. 57 Pak. It holds 12 2¼-in. Round Jiffies (fill the pots with soil first and press into the Pak) or try the 1¾ in. Jiffy Strip—break the strip in half and put the two units of six in side by side. Customers appreciate these individual plants, easy to set out and convenient to handle.

Case of 100 (wt. 14 lbs.)	$ 7.75 per cs.
Case of 200 (wt. 26 lbs.)	14.50 per cs.
1000-9000 (130 lbs. per M)	69.00 per M
10,000 or more	66.00 per M

NO. 42
MARKET-PAK

Market-Paks prepaid on 150 lbs. or more of combined sizes. Also may be combined with Jiffy Pots and Jiffy Strips. See inside back cover. Smaller shipments at purchaser's expense. Net cash, less 2% discount.

MARKET-PAKS

Grow and Sell Plants the Modern Way

Neat, sturdy, convenient packages for plant sales—customers buy more plants with less help in Market-Paks. Light in weight, easy to handle, attractive brick-red in color with smooth finish. Plants thrive in these durable, well-drained fiber flats, now the standard plant-selling containers. Highly popular, millions used.

NO. 42 MARKET-PAK

7½ x 5½ in. at top, 2¼ in. deep.

The original plant container for dozen-unit sales. Thousands of bedding plant growers use them with great success.

Case of 200 (wt. 20 lbs.)	$ 8.80 ea.
1000 to 9000 (wt. 100 lbs. per M)	40.00 per M
10,000 to 50,000	38.00 per M
50,000 or more	35.00 per M

NO. 44 MARKET-PAK

7½ x 5½ in. at top, 2¾ in. deep.

Same as the No. 42 except that these are ½ in. deeper, providing more soil for better root growth, sturdier plants. Makes a better-proportioned sales package, we believe.

Case of 200 (wt. 23 lbs.)	$ 9.80 ea.
1000 to 9000 (wt. 115 lbs. per M)	45.00 per M
10,000 to 50,000	43.00 per M
50,000 or more	40.00 per M

NO. 60 MARKET-PAK

6 x 10 in. at top, 2⅝ in. deep.

A large unit with a long shape, popular with some growers. Particularly good for pansies, fine for tomatoes.

Case of 200 (wt. 28 lbs.)	$13.40 ea.
1000 to 9000 (wt. 140 lbs. per M)	61.00 per M
10,000 or more	57.00 per M

BLACK PLASTIC MULCH

Gives wonderful results on melons, useful for cukes, squash, etc. Write for full information and prices on larger quantities. 1½-mil black polyethylene film (Gering).

Best size: 4 ft. x 1000 ft. (wt. 30 lbs.) $15.00 not prepaid*

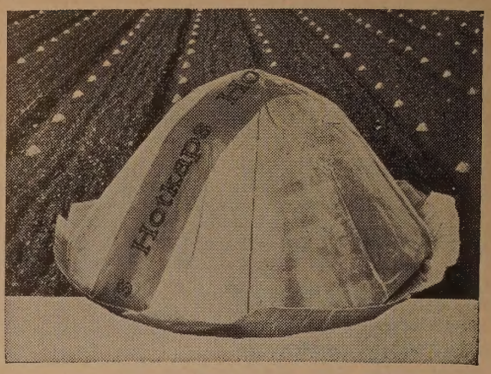
"NO-DAMP-OFF" SPHAGNUM MOSS

This milled sphagnum moss is of great benefit in starting fine seeds, with less risk of damp-off. Use it as a thin layer over regular soil for petunias, snaps, celery, etc. Full directions with package.

10 Oz. Pkg. $1.10;
2 cu. ft. size (wt. 6 lbs.) $3.95
postpaid to 5th zone.

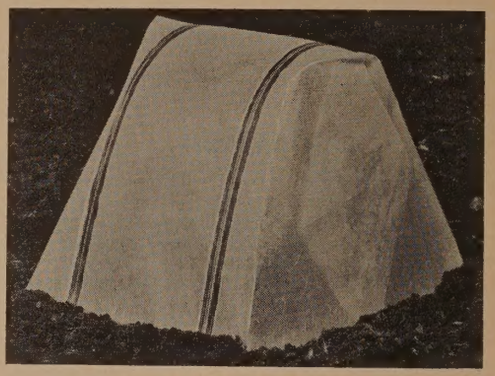
HOTKAPS and HOTENTS



HOTKAPS

These strong wax paper covers form little hot houses over each plant or hill of seed. Permit earlier planting, promote better growth, quicker maturity. Good protection against frost, wind, beating rains and insects. Easy to ventilate during warm periods.

100 with Fibre Setter (wt. 4 lbs.).....$4.25
250 with Fibre Setter (wt. 8 lbs.).....$7.75
Above postpaid to 5th zone
1000 to 4000 without Setter (wt. 27 lbs. per M) $21.90 per M NOT prepaid*
5000 or more.... $21.50 per M NOT prepaid*



New KINGTENTS

KINGTENTS *(New)* *11 x 11 x 9 in.*

Smaller at base but taller than Hotents, better for tomatoes and other crops that tend to get tall. Well reinforced, should ventilate well.

500 (wt. 40 lbs.).....$17.95 NOT prepaid*
1000 to 4000 @ $34.50 per M...NOT prepaid*
5000 or more @ $33.50 per M... NOT prepaid*
(Available only in cartons of 500.)

HOTENTS—*14 x 11 x 8 in.*

Strong, reinforced with wire. Excellent for melons, summer squash, etc.

500 (wt. 32 lbs.).....$17.95 NOT prepaid*
1000 to 4000 @ $34.50 per M...NOT prepaid*
5000 or more @ $33.50 per M...NOT prepaid*
(Available only in cartons of 500.)

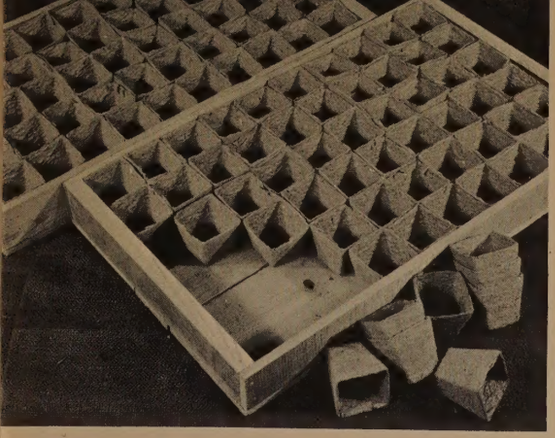
SUPER HOTENTS—*14″ x 18″ x 12″.*

Extra large, strong, wire reinforced.

500 (wt. 60 lbs.).....$25.35 NOT prepaid*
1000 to 4000 @ $49.50 per M...NOT prepaid*
5000 or more @ $48.50 per M...NOT prepaid*
(Super Hotents cannot be sent by mail.)

SETTERS

HOTKAP Steel Setters (4 lbs.) $1.95 NOT prepaid*
HOTENT Metal Setters (4 lbs.) $3.25 NOT prepaid*
KINGTENT Metal Setter (4 lbs.) $3.25 NOT prepaid*
SUPER HOTENT Metal Setters (wt. 6 lbs.) $3.50 each NOT prepaid*



2¼-inch SQUARE JIFFY POTS

JIFFY POTS®

The Best Peat Pots

"Everything Grows Better in Jiffy Pots"

Few recent introductions have brought as great benefits to growers as these remarkable plant containers. Impregnated with just the right amount of nutrients, they support excellent growth; they need less watering, provide proper root aeration and in transplanting are set out in the field "pot and all" with no wilting or check in growth, since the roots grow right through them. This means earlier harvest and greater yields.

Made in Norway of 75% long-fibered peat and 25% wood fiber, they are wonderful for all kinds of bedding plants, mums, begonias, etc. Ideal for early tomatoes, melons, squash and other vegetables. Now available in a wide range of sizes and in the new Jiffy Strips for easier handling (see below). We consider them the best plant containers yet and use hundreds of thousands ourselves. A Jiffy-Pot transplanter is now available for larger-scale field setting.

Jiffy Pots

Various sizes may be combined to obtain quantity prices. Freight allowed on 150 lbs. or more of combined sizes. May also be combined with Market Paks and Jiffy Strips. Please order in case lots. See box below.

JIFFY POTS and MARKET PAKS: CASH, LESS 2% DISCOUNT.

FREIGHT ALLOWED ON 150 LBS. COMBINED POTS and PAKS.

If your order for Jiffy Pots, Jiffy Strips and Market Paks totals 150 lbs. or more, we will prepay transportation. Note that other accessories, Hotkaps, Plant Bands, etc. are all quoted f.o.b. Rochester. Smaller quantities of Market Paks and Jiffies are sent at purchaser's expense. See inside front cover and specify mail, express or truck.

Mail Shipments: Ask your local post office for rates and send postage with order. Note size and weight restrictions.

JIFFY STRIPS and POLY TRAYS

The new 2¼-inch JIFFY STRIP

A brand new size of these convenient dozen-plant units is now available—twelve 2¼ in. Square Jiffy Pots joined together for easier, quicker handling like the popular 1¾ in. Strips, introduced last year. These should fit the flats you are now using for separate 2¼-in. square pots.

Both sizes are excellent for bedding plants and make a wonderful sales unit when handled in the Poly Trays made to fit. Easily pulled apart for transplanting.

Jiffy Strips

No. 517 1¾ in. JIFFY STRIPS ***(11¾ in. long x 3⅞ in. wide x 2 in. deep).***
Economical smaller size. Great time and labor savers.

3600 pots (case of 300 strips—35 lbs.)	$24.84 not paid
3600 to 32,400 pots (300-2700 strips)	6.90 per M pots
36,000 to 86,400 pots (3000-7200 strips)	6.55 per M pots
90,000 or more pots (7500 strips)	6.20 per M pots

No. 522 2¼ in. JIFFY STRIPS ***(12 2¼-in. Square Jiffy Pots joined together. 2¼ in. deep.)***
Larger capacity encourages better plant growth. (Available about Feb. 1, 1962.)

2400 pots (case of 200 strips—34 lbs.)	$20.16 not paid
2400 to 21,600 pots (200-1800 strips)	8.40 per M pots

Freight allowed on 150 lbs. or more of combined sizes. See box below.

Poly Trays

No. J-175 POLY TRAY for 1¾ in. Jiffy Strip.
Attractive gray plastic tray holds one 1¾ in. Jiffy Strip. Reinforced center rib, adequate drainage.

HARRIS SEEDS

Market Gardeners' and Florists' Price List

Harris' MORETON HYBRID TOMATO
Earliness, large size and superb quality combined. Still the best early tomato for plant sales and for market. See page 20.

LIBRARY
RECEIVED
★ NOV 29 1961 ★
U.S. Department of Agriculture

Harris' CARDINAL HYBRID TOMATO *(above)*
Steadily gaining in popularity. Growers like its large, firm, crack-free fruit and heavy yields. See page 20.

Harris' GOLD CUP SWEET CORN *(above right)*
Expert growers now choose Gold Cup for its tremendous crops, choice quality and superior market type. See page 8.

Harris' FRONTIER HYBRID SNAPDRAGONS
Two gorgeous new colors — gleaming white and soft rose pink — now give a complete color range in this sensational "compact" hybrid series. Vigorous, base-branching plants of medium height. See color section.
